# 1

## Introduction

The *Introduction* chapter describes the *Xcelerator IP* system and provides a summary of its many features. This information also include the protocols used to access the Internet for delivering voice/data solutions.

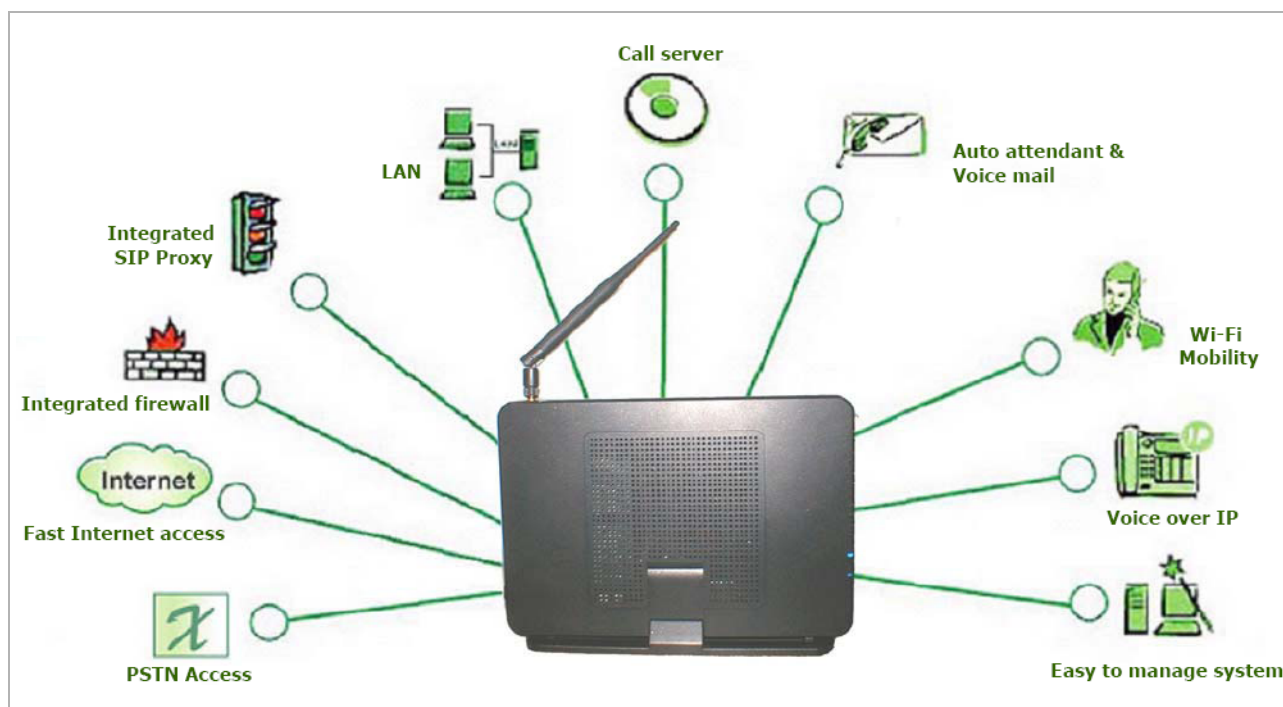

---

## Product Description

The VERTICAL *Xcelerator IP* is an integrated gateway device that provides a self-contained solution for integrated voice/data applications at small office/home locations. The *Xcelerator IP* combines a robust router/firewall with a rich voice feature suite. Also included in the system is the ability to support voice and data via an integrated 802.11G wireless interface.

Connectivity to the public network is via analog CO trunks or SIP connections. Combining the two trunking methods can provide SIP primary connections with analog fail over trunks.

### Interface Support

- ❑ WAN Interface: 10/100Base-T Ethernet port
- ❑ CO Interface: 3 FXO (Loop Start, for PSTN)
- ❑ Analog Device Interface: 1 FXS (for analog phone or FAX)
- ❑ LAN Interface: 4 Ethernet (10/100Base-T)
- ❑ Built-in 802.11g: Wi-Fi access point

### Terminal Support

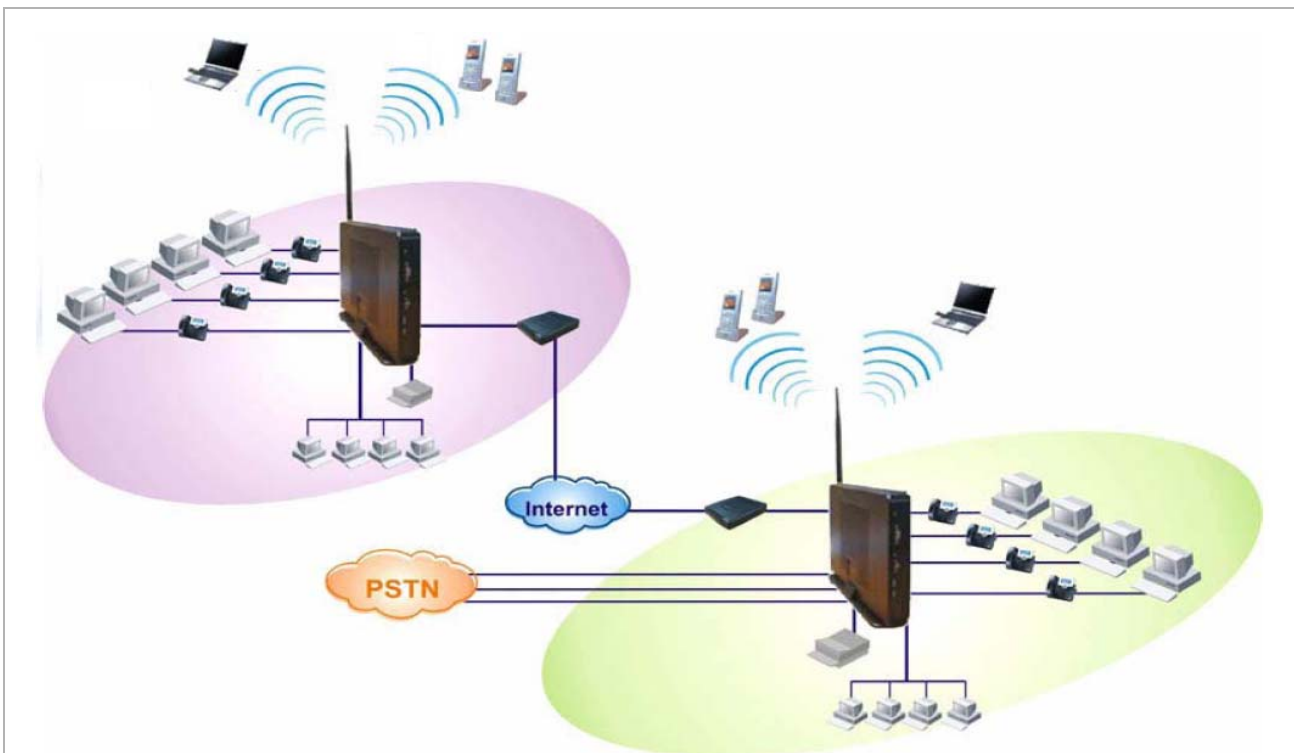

- ❑ 1 Analog Terminal
- ❑ 24 IP Stations (Wired/Wi-Fi IP Phone)

## Office Location Diagrams

### SMALL OFFICE Environment

### OFFICE TO OFFICE Environment

---

## Product Summary

### *TCP/IP Protocols*

- IP Protocol (RFC 791)
- ARP (RFC 826) / RARP (RFC 903)
- ICMP (RFC792)
- TCP (RFC 793)
- UDP (RFC 768)
- SNTP
- DNS
- HTTP
- Telnet
- TFTP
- RTP
- Static Routing
- NAT with ALGs

### *IP Address Assignment*

- Static
- Dynamic
- Subnet Mask
- PPPoE Client (RFC 2516)
- Primary and Secondary DNS
- DHCP Server (RFC 2131-2132)
- DHCP Client (RFC 2132)

### *Routing*

- RIP v1/v2
- Static routing
- DHCP Server/Relay/Client
- DNS Relay
- NAT/NAPT
- IGMP Proxy

### *Virtual Server*

- Virtual Server
- Port Trigger

---

*Chapter 1 - Introduction*

## *QoS*

IP ToS function (RFC 1349)

Priority queues for upstream traffic based on ToS field.

IP Precedence

## *VoIP Protocols*

SIP (RFC 3261)

SDP(RFC2327)

Real Time Protocol (RTP; RFC 1889)

MD5 (RFC3261 HTTP) digest authentication

G.168 Echo Cancellation

Voice Codec: G.711, G.729a and G.723.1

Support FAX/modem tone detection and auto-fallback to G.711

## *IP Trunk*

Support for up to 8 IP Trunks, which can register to an ITSP carrier.

SIP Message

*Functions include:*

INVITE

e-INVITE

ACK

CANCEL

OPTIONS

BYE

REGISTER

INFO

REFER

SUSCRIBE/NOTIFY

REPLACE (messages)

SIP Outbound Proxy, SIP Proxy and Registrar

Auto-Registration when power-on or period

Session Timer support

Support IP address, domain name, user name, display name for SIP URL

## Digital Audio

Codec:

- G.711 a-law/ $\mu$ -law 64Kbps

- G.729A/B (8Kbps)

- G.723.1(6.3K/5.3Kbps)

SIP Call Offer /Answer: Codec auto capacity exchange

Echo Cancellation: G.168 for each voice line

Silence Detection/Suppression

Comfort Noise Generation

Adaptive jitter buffer

Different frame size support (10,20,30,40, 50, and 60ms)

Packet loss concealment

Out-band (RFC2833) and In-band DTMF

## Security

Password protected system management

User authentication for PPP (PAP/CHAP/MSCHAP)

Firewall

Packet Filtering

Access Control List

Wireless Security:

- Support WEP (64, 128-bit) encryption

- 802.1x and WPA/WAP2 authentication

- MAC Address-based access control

- WDS support

## Configuration Management

LAN/WAN management via Telnet interface or Web-based browser interface

Firmware upgrade available by TFTP/ HTTP

Status display and event report from Web-based management

Settings Save and Restore

Reset to factory default

## Radio - WLAN

Standard: IEEE 802.1g and 802.11b

Media Access Control: CSMA/CA with ACK

Modulation: OFDM/CCK

Frequency Range (Range depends on different country)

Output Power: 15dBm (typical)

Sensitivity: -67 (54Mbps) / -83 (11Mbps) dBm (typical)

Data Rate: 54, 48, 36, 24, 18, 12, 11, 6, 5.5, 2, 1Mbps, auto-fallback

## *Remote Diagnostic*

Syslog

Device Diagnostic

*Enables the following remote tests:*

Test the connection to the local network

Connection to the Internet service provider

Status of individual PSTN Lines

Status of individual IP Trunk Lines

Status of individual VAA Lines

Status of the FXS port

Registered status of SIP Phones

## *Physical Interfaces*

One 10/100BaseT Internet port (RJ-45) for WAN interface

Four 10/100BaseT Internet port (RJ-45) for LAN interface

One Single Line Telephone interface (RJ-11)

Three PSTN Line interface (RJ-11)

One PSTN Backup line

## *Power Requirement*

Input: Voltage Range 90-230 VAC

Output: Linear 15V DC / 1A, 2.5mm barrel jack

## *Operating Environment*

Temperature: 0-400 C

Humidity: 10 to 90%, non-condensing

## *Physical Specification*

Dimension: 192(W) x 280(L) x 32(D) (mm)

---

---

# 2

# Installation

The *Installation* chapter describes the hardware components and system specifications you will need to know, and step-by-step instructions for using the *Xcelerator IP Wizard* application to set up the system.

## Hardware Components

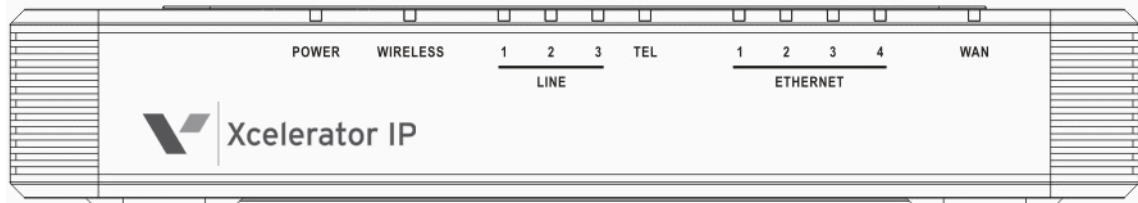

### *System Specifications*

Feature	Description	
Main Processor	240MHZ MIPS32 CPU	
Processor SDRAM	External 32MB	
Processor Flash ROM	External 4MB	
Supplementary Processor	1x DSP Voice Pump VP101-4 (4 channel/each)	
System Flash (Voice Mail)	128MB	
Switch Controller	Broadcom BCM5325E	
System Power	15V/1A	
Standards	IEEE802.11g, IEEE802.11b, IEEE802.3	
Ports	1xWAN, 4xLAN, 1xFXS, 3xFXO	
Reset Button	Power on/off	
Cabling	RJ-45, RJ-11	
LEDs	POWER, WIRELESS, 3LINE, TEL, 4ETHERNET, WAN	
EMI/EMC	FCC Part15 Class B	
Environmental	Operating Temp:	.0°C to 40°C (32°F to 104°F)
	Storage Temp:	-20°C to 70°C (-4°F to 158°F)
	Operating Humidity:	10% to 80% relative humidity, Non-Condensing
	Storage Humidity:	10% to 90% Non-Condensing

## Gateway/Router

### Front Panel

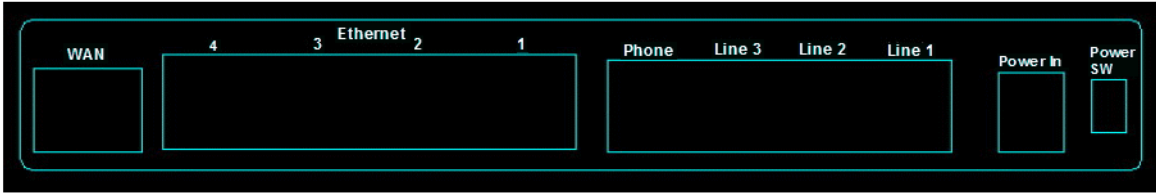

The front panel contains several LEDs that indicate the status of the unit.

LED Name	Color	Status	Description
POWER	Blue	On	Power on.
		Off	Power off.
WIRELESS	Blue	On	Wireless LAN initialization success.
		Off	Wireless LAN is not present.
LINE (1-3)	Blue	On	PSTN Line is busy.
		Off	PSTN Line is idle.
TEL (Phone)	Blue	On	Phone is busy.
		Off	Phone is idle.
ETHERNET(1-4)	Blue	On	LAN connection detected.
		Off	LAN network connection not present.
		Flashing	LAN activity present (traffic in either direction).
WAN (Internet)	Blue	On	WAN connection detected.
		Off	WAN network connection not present.
		Flashing	WAN activity present (traffic in either direction).

Rear Panel

The rear panel contains the ports for the unit's data and power connections.

Label	Function
WAN	RJ-45 connector: Connection to a cable modem or ADSL Modem which provides the interface to the public network
Ethernet 1-4 (LAN)	RJ-45 connector: Connection for local attached PC Ethernet ports or the uplink port on your LAN hub
Phone	RJ-11 connector: Connection for an analog station device (FXS port)
Line 1-3	RJ-11 connector: Connection to analog CO ports (FXO ports)
Power	Connection for supplied AC adapter
On/Off	Power switch to turn the <i>Xcelerator-IP</i> on or off

---

## Using the Wizard Program

This Installation section will help you to install the *Xcelerator IP* quickly and easily. For more detailed instructions and further setup options, refer to [Chapter 5, Xcelerator IP Configuration](#).

### Setup Wizard

This system administrator can configure the *Xcelerator IP* remotely or locally via a Web Browser. When *Xcelerator IP* is set to its default factory settings, the LAN address is "192.168.1.1", the user name is "admin", and the password is "admin".

When the *Xcelerator IP* is started initially, or after being set to default configuration, the Setup Wizard will activate upon system power up. The Setup Wizard is a series of menus to assist the administrator with getting the *Xcelerator IP* up and running. The default settings for the Setup Wizard will allow the *Xcelerator IP* to be operational out of the box. For a detailed description of the Setup Wizard default settings, refer to ["Xcelerator IP Default Settings" on page 5-3](#).

The Setup Wizard allows the system administrator to select the appropriate programming section(s) and configure the corresponding features. The following eight programming sections are supported.

- ☐ WAN Settings
- ☐ LAN Settings
- ☐ Wireless Basic
- ☐ Wireless Security
- ☐ Internet Time
- ☐ Numbering Plan
- ☐ IP Trunk
- ☐ Call Routing Table

In the Setup Wizard, the administrator can navigate through the various programming sections using the "Next" or "Back" buttons to choose the specific program to be modified. At the end of the programming session, the administrator will select "Exit & Reboot", at which time any changes to the system will be saved and the *Xcelerator IP* will automatically reboot. The Setup Wizard runs only on initial startup of the *Xcelerator IP*. Unless the *Xcelerator IP* is reset to its default configuration, the administrator will be pointed to the *Xcelerator IP* home page when accessing the unit.

## WAN Settings

There are three modes that you can configure WAN IP address:

- ☐ Static IP mode
- ☐ DHCP mode
- ☐ PPPoE mode

You can also select to enable or disable Firewall and IGMP protocol settings.

Note that Network Address Translation function (NAT) is default enabled and is not showing on the page to prevent it from being disabled.

### Static IP Setting

This page shows the current existing WAN interface if the system is in Static IP mode.

**Xcelerator Wizard Setup**

Wan Settings | Lan Settings | Wireless Basic | Wireless Security | Internet Time | Numbering Plan | IP Trunk | Call Routing Table

**IP Settings**

Enter information provided to you by your ISP to configure the WAN IP settings.

Static IP

Internet IP Address: 192.168.10.210

Subnet Mask: 255.255.255.0

Gateway: 192.168.10.1

Static DNS 1: 202.103.24.68

Static DNS 2: 202.103.0.68

**Wan Services**

Enable Firewall ☒

Enable Igmp ☐

Next Exit & Reboot

- ☐ Static IP is also called Fixed IP. Enter your assigned IP Address, Subnet Mask, and the IP Address of your gateway router provided by your ISP.
- ☐ Enter the IP addresses of your Primary and Secondary DNS Servers provided by your ISP.

### **Automatic - DHCP Setting**

The Dynamic Host Configuration Protocol (DHCP) is an Internet protocol for automating the configuration of computers that use TCP/IP. DHCP can be used to automatically assign IP addresses, to deliver TCP/IP stack configuration parameters such as the subnet mask and default router, and to provide other configuration information.

This page shows the current existing WAN interface in the system by DHCP mode.

**Xcelerator Wizard Setup**

Wan Settings | Lan Settings | Wireless Basic | Wireless Security | Internet Time | Numbering Plan | IP Trunk | Call Routing Table

**IP Settings**

Enter information provided to you by your ISP to configure the WAN IP settings.

Automatic Configuration - DHCP ▼

☒ Automatic Assigned DNS

☐ Static DNS

**Wan Services**

Enable Firewall ☒

Enable Igmp ☐

Next Exit & Reboot

### PPPoE IP Setting

The Point-to-Point Protocol over Ethernet (PPPoE) requires a user name and password that your ISP provides for the establishment of your connection.

This page shows that the current existing WAN interface in the system is PPPoE mode. Enter the User Name and Password as provided by your ISP. These fields are case sensitive.

The screenshot shows the 'Xcelerator Wizard Setup' window with the 'IP Settings' tab selected. The window has a title bar and a menu bar with options: Wan Settings, Lan Settings, Wireless Basic, Wireless Security, Internet Time, Numbering Plan, IP Trunk, and Call Routing Table. The 'IP Settings' section contains instructions and fields for configuring WAN IP settings. A dropdown menu shows 'PPPoE' selected. Below are fields for 'PPP Username:', 'PPP Password:', and 'Authentication Method:' (set to 'AUTO'). There are radio buttons for 'Automatic Assigned DNS' and 'Static DNS' (selected). Under 'Static DNS', there are fields for 'Primary DNS server:' (202.103.24.68) and 'Secondary DNS server:' (202.103.0.68). The 'Wan Services' section has checkboxes for 'Enable Firewall' (checked) and 'Enable Igmp' (unchecked). At the bottom are 'Next' and 'Exit & Reboot' buttons.

**Xcelerator Wizard Setup**

Wan Settings | Lan Settings | Wireless Basic | Wireless Security | Internet Time | Numbering Plan | IP Trunk | Call Routing Table

**IP Settings**

Enter information provided to you by your ISP to configure the WAN IP settings.  
PPP usually requires that you have a user name and password to establish your connection. In the boxes below, enter the user name and password that your ISP has provided to you.

PPPoE

PPP Username:

PPP Password:

Authentication Method: AUTO

☐ Automatic Assigned DNS

☒ Static DNS

Primary DNS server: 202.103.24.68

Secondary DNS server: 202.103.0.68

**Wan Services**

Enable Firewall ☒

Enable Igmp ☐

Next Exit & Reboot

## LAN Setting

The LAN settings program configures the IP address and Subnet Mask for the system LAN interface. You can also select to enable or disable DHCP Server and configure related settings for that mode.

*When needed ... check the "Secondary IP" to configure the secondary IP address and Subnet Mask for LAN. This IP address is used for management only.*

*DHCP should not be used if a DHCP Server already exists in the Network.*

The screenshot shows the 'Xcelerator Wizard Setup' window with the 'Lan Settings' tab selected. The title bar reads 'Xcelerator Wizard Setup'. The tab bar includes 'Wan Settings', 'Lan Settings' (highlighted), 'Wireless Basic', 'Wireless Security', 'Internet Time', 'Numbering Plan', 'IP Trunk', and 'Call Routing Table'. The main heading is 'Configure Router IP Address and Subnet Mask for LAN interface'. It contains two input fields: 'IP Address:' with '192.168.1.1' and 'Subnet Mask:' with '255.255.255.0'. Below these is a 'Dhcp Info' button. Underneath, there are two radio buttons: 'Disable DHCP Server' (unselected) and 'Enable DHCP Server' (selected). The 'Enable DHCP Server' section has three input fields: 'Start IP Address:' with '192.168.1.2', 'End IP Address:' with '192.168.1.254', and 'Leased Time (hour):' with '24'. At the bottom, there is a checked checkbox 'Configure the second IP Address and Subnet Mask for LAN interface' followed by empty input fields for 'IP Address:' and 'Subnet Mask:'. At the very bottom are three buttons: 'Back', 'Next', and 'Exit & Reboot'.

## Wireless Basic

The Wireless Basic program allows you to configure basic features of the wireless LAN interface. You can perform the following types of functions:

- ☐ Enable or disable the wireless LAN interface.
- ☐ Hide the network from active scans.
- ☐ Set the wireless network name (also known as SSID).
- ☐ Restrict the channel set based on country requirements.

The screenshot shows the 'Xcelerator Wizard Setup' window with the 'Wireless Basic' tab selected. The window has a title bar and a menu bar with options: Wan Settings, Lan Settings, Wireless Basic, Wireless Security, Internet Time, Numbering Plan, IP Trunk, and Call Routing Table. Below the menu bar, a descriptive text states: 'This page allows you to configure basic features of the wireless LAN interface. You can enable or disable the wireless LAN interface, hide the network from active scans, set the wireless network name (also known as SSID) and restrict the channel set based on country requirements.' The 'Wireless Basic' section contains the following configuration options: 'Enable Wireless' (checked), 'Hide Access Point' (unchecked), 'SSID' (text field with 'Xcelerator'), 'BSSID' (text field with '00:03:C9:06:E4:9B'), and 'Country' (dropdown menu with 'UNITED STATES'). At the bottom, there are three buttons: 'Back', 'Next', and 'Exit & Reboot'.

## GUIDELINES

The operating distance or range of your wireless connection can vary significantly based on the physical placement of the wireless firewall. The latency, data throughput performance, and notebook power consumption also vary depending on your configuration choices.

### ***For best results, place your Xcelerator IP unit:***

- ☐ Near the center of the area in which your PCs will operate.
- ☐ In an elevated location such as on a high shelf where the wireless connected PCs have line-of-sight access (even if through walls).
- ☐ Away from sources of interference, such as PCs, microwaves, and 2.4 GHz cordless phones.
- ☐ Away from large metal surfaces.

The time it takes to establish a wireless connection can vary depending on both your security settings and placement. WEP connections can take slightly longer to establish. Also, WEP encryption can consume more battery power on a notebook PC.

## Wireless Security

The Wireless Security program allows you to configure the security features of the wireless LAN interface. You can configure the following functions:

- ☐ Set the network authorization method.
- ☐ Select data encryption.
- ☐ Specify whether a network key is required to authenticate to this wireless network, and specify the encryption strength.

The screenshot shows the 'Xcelerator Wizard Setup' window with the 'Wireless Security' tab selected. The tab bar includes 'Wan Settings', 'Lan Settings', 'Wireless Basic', 'Wireless Security' (highlighted), 'Internet Time', 'Numbering Plan', 'IP Trunk', and 'Call Routing Table'. Below the tabs, a descriptive paragraph states: 'This page allows you to configure security features of the wireless LAN interface. You can set the network authentication method, selecting data encryption, specify whether a network key is required to authenticate to this wireless network and specify the encryption strength.' The 'Wireless Security' section title is followed by the instruction 'Configure security features of the wireless LAN interface.' There are two configuration fields: 'Network Authentication:' with a dropdown menu set to 'Open', and 'WEP Encryption:' with a dropdown menu set to 'Disabled'.

### Wireless Data Security Options

Unlike wired network data, your wireless data transmissions can extend beyond your walls and can be received by anyone with a compatible adapter. For this reason, use the security features of your wireless equipment. The *Xcelerator IP* router provides highly effective security features which are covered in Chapter 5. Deploy the security features appropriate to your needs. *For more details, refer to "Wireless - Security Parameters" on page 5-19.*

Restricting access by MAC address filtering adds an obstacle against unwanted access to your network, but the data broadcast over the wireless link is fully exposed.

To block a determined eavesdropper, you should use one of the data encryption options of the firewall. Wired Equivalent Privacy (WEP) data encryption provides data security.

## Internet Time

The Internet Time program allows you to configure the NTP time server so that the *Xcelerator IP* system time is synchronized to a known reference clock source. This synchronization is useful for System Log data.

The screenshot shows the 'Xcelerator Wizard Setup' window with the 'Internet Time' tab selected. The 'Time Settings' section contains the following configuration options:

- Time Settings**  
Configure the NTP time server so the GW6000 can have correct system time.  
☒ Automatically synchronize with Internet time servers
- First NTP time server:** A dropdown menu showing 'time.nist.gov' and an adjacent text input field.
- Second NTP time server:** A dropdown menu showing 'None' and an adjacent text input field.
- Time zone offset:** A dropdown menu showing '(GMT-07:00) Arizona, Mazatlan'.

At the bottom of the configuration area are three buttons: 'Back', 'Next', and 'Exit & Reboot'.

## Numbering Plan

*Xcelerator IP* has a flexible numbering plan so that phone or trunk numbers can be customized to meet a wide range of applications. The dialed number is verified against the numbering plan to ensure there are no conflicts with other system resources.

### DEFAULT Numbering

- 100 - 124 = IP Telephones
- 125 = Single Line Telephone
- 200 = Voice Mail Pilot Number

**Xcelerator Wizard Setup**

Wan Settings Lan Settings Wireless Basic Wireless Security Internet Time Numbering Plan IP Trunk Call Routing Table

### Numbering Plan

GW6000 has a flexible numbering plan so that the system directory numbers can be customized to meet a wide range of applications. It's disallowed to conflicting among the directory numbers of the all system resources. [MORE >](#)

Start extension number	<input style="width: 60%;" type="text" value="100"/>
End extension number	<input style="width: 60%;" type="text" value="125"/>
Operator extension during day	<input style="width: 60%;" type="text" value="100"/>
Operator extension during night	<input style="width: 60%;" type="text" value="100"/>
FXS Phone Number	<input style="width: 60%;" type="text" value="125"/>
Operator speed-dial number	<input style="width: 60%;" type="text" value="0"/>

### Sip Authentication

No.	Phone Number	Password
1	<input style="width: 100%;" type="text"/>	<input style="width: 100%;" type="text"/>
2	<input style="width: 100%;" type="text"/>	<input style="width: 100%;" type="text"/>
3	<input style="width: 100%;" type="text"/>	<input style="width: 100%;" type="text"/>

## Call Routing Table

The Call Routing Table automatically routes outgoing calls using the most appropriate route which is based on the number dialed. If necessary, the *Xcelerator IP* can automatically modify the dialed number by deleting and/or inserting digits.

**Xcelerator Wizard Setup**

**GW6000 Router Reboot**

The GW6000 Router is rebooting.

Close the GW6000 Router Configuration window and wait for 2 minutes before reopening your web browser. If necessary, reconfigure your PC's IP address to match your new configuration.

The installation of the *Xcelerator IP* is now complete.

For additional details for each of these items ... as well as information concerning advanced configuration & programming, refer to [Chapter 5, Xcelerator IP Configuration](#).

---

---

# 3

## System Functions

The System Functions chapter provides descriptions of the *Xcelerator IP* system features in alphabetical order.

---

## Access Control

***Xcelerator IP* Web Page Access Control** provides access to the programming of the *Xcelerator IP* gateway. For system administration, only one user can be logged onto the system web page at any time; a second user cannot access the *Xcelerator IP* until the first user has completed their activity on the system or until the expiration of a three minute no-activity timer.

**IP2007 Phone Web Page Access Control** provides an external user access to the internal IP phone's Web page. There are two methods to access the IP2007:

- ❑ From the *Xcelerator IP* gateway web access, the *Registered Phone* page will list all registered phones with their IP links. Clicking a specific link will open that specific IP phone's Web page.
- ❑ By entering the user name and password of IP phone's voice mail from the IP2007 Phone Web Page log in screen. This will allow the user to connect to the IP2007 Phone administration interface.

---

## Answering Position

For incoming calls from the Public Switched Telephone Network (PSTN) (via analog CO or FXO ports), the *Xcelerator IP* provides the flexibility to ring specific destinations. The *Xcelerator IP* also provides the ability to simultaneously ring up to 24 extensions when programmed in a Hunt Group, or the Operator in accordance with the system service mode (day or night). The user can also assign a line to ring directly to an extension. Incoming VoIP calls from a registered ITISP can be programmed and routed in the same manner as the analog CO (FXO) ports.

---

## Auto Attendant & Voice Mail

The *Xcelerator IP* Auto Attendant can greatly enhance business productivity by providing either a full-time automated attendant to handle all incoming system calls or part-time automated attendant to handle overflow traffic. The Automated Attendant & Voice Mail Module provide 128MB of programmable voice announcements. It provides four ports to handle four (4) simultaneous callers, and the following Attendant/Voice Mail functions.

### Auto Attendant Functions

The Auto Attendant provides an incoming caller with a customized welcome greeting and specific prompts that will describe the options available to the caller.

- ❑ Offers four types of main greeting messages: Day, Night, Lunchtime, and Holiday.
- ❑ Prompts the caller to:
  - Dial an extension number or operator code to reach the appropriate destination.
  - Leave a message in a particular mailbox.
  - Make an outside call (with appropriate password).
  - Set Direct Call Forward to their voice mailbox.
  - Forward incoming calls to another extension.
  - Set Do Not Disturb to stop the incoming line call from ringing.

## Voice Mail Functions

All mailbox users have access to these mailbox features:

- ☐ Delete, save, or skip messages.
- ☐ Send messages to other mailbox.
- ☐ Receive message information indicating date, time, and Caller ID info, if available.
- ☐ Change personal greeting and password.
- ☐ Playback controls when reviewing messages.
- ☐ Record a temporary greeting.
- ☐ Send notification via e-mail when a message is left in the caller's voice mailbox.
- ☐ Attach a .wav file when sending notification via e-mail once a message is left in the caller's voice mailbox.
- ☐ Maximum message recording length for each call is 180 seconds.
- ☐ Total message recording time for each station is based on the number of phones connected to the system (240 minutes maximum per system).
- ☐ Saved messages will be retained for 1-7 days before being overwritten.

## Voice Messages

- ☐ Support for two languages is provided for the all voice prompts.
- ☐ Administrators can record all voice prompts.
- ☐ Administrators can update/backup/delete all voice prompts from the *Xcelerator IP*.

---

## Call Abandon

For every PSTN call, the *Xcelerator IP* monitors the call status. If the remote party hangs up, the ongoing call will be terminated.

---

## Call Operator (Call Attendant)

One primary operator may be assigned in the system. The standard IP phone will serve as the operator telephone. When assigned as operator, this extension supports general system functions.

When an internal extension dials Operator Directory Number ("0" at default), or an outside party dials "0" when the Auto Attendant plays the Welcome message, these calls will be routed to the Operator Queue. The Operator supports a First-In-First-Out operation to service these calls. During any time the calling party is queued for the Operator, the calling party hear Music-On-Hold (if programmed).

---

## Call Routing

The Call Routing feature automatically routes outgoing calls using the most appropriate route which is based on the number dialed. If necessary, *Xcelerator IP* can automatically modify the dialed number by deleting and inserting digits.

The call routing destination is: a PSTN or IP line, a line group, or another *Xcelerator IP*.

---

## Caller ID

*Xcelerator IP* provides the ability to detect the calling party identification provided by the CO via PSTN lines or by an Uplink Server via IP trunks. This data, when received by the telephone carrier, will be displayed on all ringing IP phones or a Caller ID equipped Single Line Telephone.

---

## Class Of Service (COS)

*Xcelerator IP* provides eight (8) Classes of Service (COS) for assignment of outside line dialing-privileges. Each extension may be assigned one Day-COS and one Night-COS. The Extension COS is used primarily for restriction and control of long distance dialing. COS 0 is the highest priority while COS 7 is the lowest priority.

---

## Day & Night Service Mode

*Xcelerator IP* provides Day and Night settings via a Service Mode setting. Depending on the *Xcelerator IP* Service Mode settings, incoming trunk calls can be forwarded to a specific station or stations.

---

## Daylight Saving Time

Daylight Saving Time (DST) feature supports auto adjustment for daylight saving time.

---

## Default Set

When the feature is active, the extension will return to default settings. The following options will be effected:

- ☐ Cancel any Call Forward via AA
- ☐ Cancel DND via AA
- ☐ Set Paging Accept
- ☐ Default Feature Key Setting

---

## Direct Inward System Access (DISA) via Auto Attendant

The current PSTN/IP lines are all DISA lines. While ringing to the Auto Attendant, the outside callers have direct access to extensions, PSTN/IP lines, Call Routing and Trunk Groups.

---

## Dynamic DNS

*Xcelerator IP* support Dynamic DNS to see the DDNS host name as *Xcelerator IP*'s WAN IP address in SIP applications. The *Xcelerator IP* will have to have a static domain name for dynamic IP address.

Before using the feature, you must register any domains using Dynamic DNS on DynDNS.org or TZO.

---

## Extension Password

All extensions of the *Xcelerator IP* have an associated User Password. Password length is system programmable from 0 to 24 characters.

---

## Fax/Modem

*Xcelerator IP* supports FAX/modem tone detection and auto-fallback to G.711.

---

## Feature Key Programming

Feature Keys can be programmed by phone users. A feature key can be programmed as one of four line appearances.

---

## Flash - Analog Port (SLT) Flash Recognition

Flash is the momentary operation of the hook-switch at the analog device, which can be deciphered by the *Xcelerator IP* in such a way that the current call in progress is held, or placed in a status of transfer awaiting further instructions from the user.

---

## Gateway to Gateway

A call may be placed from one *Xcelerator IP* to another *Xcelerator IP* via the Call Routing Table. The call Routing Table allows the user to make a direct call to an extension in another *Xcelerator IP*. It also allows the user to share the PSTN or IP Trunks in another *Xcelerator IP* to make an outside call.

---

## IP Trunk

*Xcelerator IP* can register up to 8 SIP Uplink Servers. The extensions may make a call to the users of the Uplink Servers, or any user in the world through the Uplink Servers.

- ❑ SIP messages --> INVITE | re-INVITE | ACK | CANCEL | OPTIONS | BYE | REGISTER | INFO | REFER | SUSCRIBE/NOTIFY | REPLACE
- ❑ SIP Outbound Proxy, SIP Proxy and Registrar
- ❑ Auto-Registration when power-on or period
- ❑ Session Timer support
- ❑ Support IP address, domain name, user name, display name for SIP URL

---

## Line Group Assignment

The *Xcelerator IP* can assign each PSTN/IP line to a specific Line Group. Each line can be assigned to only one Line Group. The Line group assignment is used for Line pool access. Both PSTN lines and IP lines can be programmed into the same Line Group. The line access sequence will be dependant upon the access priority.

---

## Make an Outside Call

The *Xcelerator IP* provides three methods to make an outside call:

- ❑ The extension user dials the phone number directly. *Xcelerator IP* automatically routes the outgoing call using the least expensive line via Call Routing Table.
- ❑ The extension user dials a Line number or a Line Group number first. After hearing dial tone, the user dials the phone number.
- ❑ The extension user presses a Line Key first. After hearing dial tone, the user dials the phone number.

---

## Message Waiting Indication

When a message is left in the called party voice mailbox, the IP2007 LCD will display new voice mail information, and its voice mail LCD will flash accordingly.

---

## Multi-Line Appearance

*Xcelerator IP* provides PSTN line and IP line status to the phones.

Trunk LED:

- ☐ Dark – the line is idle
- ☐ Lit – the line is in use

---

## Music On Hold

Any PSTN/IP line calls which is placed on hold will provide music to the external calling party.

---

## Numbering Plan

The Numbering Plan refers to the structure of dialed access to the various resources that are part of the *Xcelerator IP*. The *Xcelerator IP* provides a very flexible numbering plan for configuring the various system resources.

---

## Paging

A Page can be initiated from any extension in the system. Dialing a Paging Group Directory number allows an extension to broadcast a page to all assigned members of the selected paging group.

---

## Plug & Play

While connecting IP2007 phones to an *Xcelerator IP* LAN port, the IP2007 will automatically register to the *Xcelerator IP*. The IP 2007 will accept the DHCP addressing and station attributes from the *Xcelerator IP* gateway and place itself in a ready state to make and receive both internal and external calls.

---

## Polarity Reversal (PR) Detection

When making an outgoing PSTN call, the system must know if the remote party answers the call or not (for SMDR recording purpose). If the CO provides a Polarity Reversal Detection signal, the *Xcelerator IP* can monitor the signal to determine whether the remote party answers the call or not.

---

## PSTN Backup

In case of power failure, *Xcelerator IP* automatically switches the first PSTN line to the Single-line analog phone (SLT) port. The other PSTN lines are not supported.

---

## Registration

The *Xcelerator IP* combines Proxy and Registrar servers in its application. For a Registrar server, it acts as the front end to the location service for a domain, reading and writing mappings based on the contents of REGISTER requests. The location service is then typically queried by a Proxy server.

---

## Remote Management via PC

Programming the *Xcelerator IP* database is possible via a PC. The user can access the *Xcelerator IP* build-in a web server for remote administration.

---

## System Time & Date

The *Xcelerator IP* provides a built-in time clock to track System Time for reference in certain features such as System Night Service Mode Change. This clock has the ability to automatically synchronize with network an NTP server via the Internet.

---

## Toll Restriction

*Xcelerator IP* provides sophisticated monitoring of digits dialed on PSTN/IP Trunks. If a digit or range of digits dialed on a Trunk line is inconsistent with the dialing extension's COS, the call is denied. This calling COS criteria can be applied to local calls, long distance calls, and specific numbers that are considered allowed in areas where other numbers may be restricted.

---

## Transfer

Transfer is used to deliver calls at your extension to another extension. It means that calls can be routed to *Xcelerator IP* destinations such as an extension or an outside phone number.

---

## Trunk Group

The Trunk Group feature is used to assign each PSTN Trunk and IP Trunk to a specific Trunk Group. Each Trunk can be assigned to only one Trunk Group. The Trunk group assignment is used for Trunk pool access. If setting some PSTN trunks and some IP trunks into the same Trunk Group, the trunk access sequence will depend on the access priority. The *Xcelerator IP* provides up to 4 Trunk Groups. All PSTN Trunks and IP Trunks are assigned to default Trunk Group 1 and PSTN Trunks have a higher access priority.

---

## Wizard Setup

The *Xcelerator IP* has a setup Wizard that provides the system administrator with a series of step-by-step operations. The setup Wizard starts automatically when the *Xcelerator IP* is powered up for the first time, or if the system is reset to default configuration via the reset switch on the *Xcelerator IP* unit. The following programming/operation areas are supported through the setup Wizard:

- ☐ WAN Setting
- ☐ LAN Setting
- ☐ Wireless Basic
- ☐ Wireless Security
- ☐ Internet Time
- ☐ Numbering Plan
- ☐ IP Trunk
- ☐ Call Routing Table

The *Xcelerator IP* default configuration provides the user with a preset configuration that will allow the system to come online and operate once analog CO trunks are attached to the system. The system defaults are contained in the setup Wizard and are displayed in the user screen examples in the Installation section of this manual.

---

---

# 4

## Phone Features

The *Phone Features* chapter lists the user functions in alphabetical order, and provides instructions for using each of the features available on the IP2007 telephone.

## Comparing SIP Phone Features

The features shown in the following chart are supported on the Vertical IP2007 Phone and the FXS (SLT) port.

Features supported by other manufacturer's SIP phones are dependant upon their SIP integration and should be consulted for specific compatibility. The information on this chart reflects *Xcelerator IP* support for standard SIP features and does not imply support for any SIP phones not specifically supported by Vertical Communications.

### Comparison Chart

Feature	IP 2007	FXS	Other SIP Phones
Alphanumeric Display	Yes	(dependant)	(dependant)
Basic Call	Yes	Yes	Yes
Call Forward via Auto Attendant	Yes	Yes	No
Call Hold	Yes	Yes	Yes
Call Transfer	Yes	Yes	(dependant)
Call Waiting	Yes	No	(dependant)
Conference	Yes	No	(dependant)
COS Following	Yes	No	No
Distinctive Ringing	Yes	No	No
Do Not Disturb via Auto Attendant	Yes	Yes	No
External Call Forward (ECF) via Auto Attendant	Yes	Yes	Yes
Feature Key Programming	Yes	No	No
Last Number Redial	Yes	Yes	(dependant)
LCD & Interactive Buttons	Yes	No	(dependant)
Mute	Yes	No	(dependant)
On Hook Dialing	Yes	No	(dependant)
Page Allow / Deny	Yes	No	No
Phone Book	Yes	No	(dependant)
Phone Lock/Unlock	Yes	No	No
Speed Dial	Yes	No	(dependant)
Volume Control	Yes	(dependant)	(dependant)

---

## Alphanumeric Display

The IP2007 Phone extension provides a graphic LCD that supports 64 alphanumeric characters. The LCD display is also used to provide a user interface to assist with configuration of the IP2007.

---

## Answer a Call

There are various ways to answer an incoming call:

- ☐ Lift the handset to answer the call.
- ☐ Press the SPEAKER button to answer the call in handsfree mode.
- ☐ Press HEADSET button to answer the call in headset mode.

---

## Auto Answer

You can use the Auto Answer function to automatically answer all incoming calls when you are busy. You can enable or disable this function through the LCD menus or via the Web. The default value is "Disabled".

### Phone & Web Access

- » *Phone Menu* = Left soft key to *CONFIG* > ✓ key > ▼ key to 8. Auto Answer > ✓ for options
- » *Web Menu* = Login > Phone tab > Phone Parameters ☒ Enable Auto Answer

---

## Basic Call

*To make an intercom call ...* dial a Station number (IP Terminal, SLT) or a Voice Mail number.

*To make an outgoing call ...* dial a phone number. The system chooses a PSTN line or IP trunk via the Call Routing Table to dial out. If it includes \* in the phone number, and the call is dialed through PSTN Trunk, the \* will be interpreted as a one second pause.

-or-

Dial a PSTN, an IP Trunk or a Trunk Group number first. After hearing a dial tone, dial the phone number.

---

## Call Forward via Auto Attendant

The Auto Attendant Call Forwarding feature reroutes incoming trunk calls from one extension to another destination. The destination of a call forward can be another extension, a voice mailbox or an outside phone number. *Xcelerator IP* supports the Call Forward functions as described in the following sections.

### Phone & Web Access

- » *Phone Menu* = Left soft key to *CONFIG* > ✓ key > ▼ arrow to 7. Call Forward ...
- » *Web Menu* = Login > Personal tab > Call Forward Settings

### *Direct Call Forward*

Forwards all calls without regard to the extension status.

*To enable ...* dial \*21 + extension number

-or-

\*21 + \* + (VM PSWD) + \* + external number

*To disable ...* dial \*\*21.

### *Busy Call Forward*

Forwards the incoming calls if the extension is busy.

*To enable ...* dial \*22 + extension number

-or-

\*22 + \* + (VM PSWD) + \* + external number

*To disable ...* dial \*\*22

### *No Answer Call Forward*

Forwards the incoming calls if the extension does not answer the call within the No Answer Time.

*To enable ...* dial \*23 + extension number + \* + Time

-or-

\*23 + \* + (VM PSWD) + \* + external number + \* + Time

*To disable ...* dial \*\*23

### *Direct Call Forward to VM*

Forwards all incoming calls to your voice mailbox.

*To enable ...* dial \*24

*To disable ...* dial \*\*24

---

## Call Log

The IP2007 phone can store a call log for your reference. To access your call log, use the LCD menus. There are three types of Call Logs - Missed Calls, Received Calls, or Dialed Calls. To dial from a listing, press the soft keys corresponding to the LCD menus display.

---

## Call Waiting

If Call Waiting is enabled for a specific IP2007 station, an alert (muted ring) will be played on the called party IP2007 when a second call is received and the IP2007 is in use.

*To enable Call Waiting ... dial \*99*

If Call Waiting is disabled for a specific IP2007 station, the IP2007 will return a busy tone to any calling party while the IP2007 is in use.

*To disable Call Waiting ... dial \*\*99*

---

## Caller Blocking

You can block up to 10 phone numbers from reaching you at your phone when a caller attempts to call you from one of these numbers.

### Phone & Web Access

- » *Phone Menu* = Left soft key to *CONFIG* > ✓ key > ▼ arrow to 15. Blocking List
- » *Web Menu* = Login + Personal tab + phone number + Save Settings

---

## Caller ID

The *Xcelerator IP*, by default, accepts Calling Party Name and Calling Party Number ID. Calling Party Name is only displayed if the Calling Party Name and Calling Party Number are entered in the IP2007 Phone Book. The Calling Party Number will be displayed if delivered from the serving CO.

### Phone & Web Access

- » *Phone Menu* = Left soft key to *CONFIG* > ✓ key > ▼ arrow to 12. Phone Book
- » *Web Menu* = Login > Phone Book tab > enter a party's name and number in order for caller ID to display on incoming calls

---

## Conference

The Conference feature allows the user to connect two or more parties into a single conversation.

***To establish a Conference call:***

1. Place an internal or external call.
2. Press the HOLD key to place the 1st party on hold.
3. Press the NAV key down arrow to place a second call on this line.
4. Dial the phone number of the 2nd party of this conference.
5. Press the CONFERENCE button to start the conference.

---

## COS Following

You can temporarily change the individual Class of Service of each extension on a per call basis. You may want to do this when the user goes to the office of low-priority COS extension and try to make an outgoing call, the user can use the function to use their own COS.

When using the COS Following feature, the station COS change will revert to the station's original COS after a one minute idle time-out.

*To set COS Following ... dial \*55 + (phone number) + (VM password)*

---

## Distinctive Ringing

Distinctive ring cadences can be selected allowing adjacent users to discern which extension is ringing. It also provides different ring tones for intercom and trunk calls. The default is United States.

Phone & Web Access

- » *Phone Menu* = Left soft key to *CONFIG* > ✓ key + ▼ arrow to 2. Ring
- » *Web Menu* = Login > Phone tab > Tones Used

---

## Do Not Disturb (DND) via Auto Attendant

Extension users can enable DND to stop incoming PSTN or IP Trunk calls from ringing at their phone. The DND on an extension can be allowed or denied through the feature access code. *NOTE* -- If an extension has DND and Call Forward enabled at the same time, calls follow the DND.

### Feature Code Access

*To enable ... dial \*4*

*To disable ... dial \*\*4*

### Phone & Web Access

» *Phone Menu* = Left soft key to *CONFIG* > ✓ key > ▼ arrow to 6. DND

» *Web Menu* = Login > Phone tab > Phone Parameters ☒ Enable DND

---

## Feature Key Programming

Feature Keys can be programmed by phone users. A feature key can be programmed for line appearance.

*To program a Feature Key ... dial \*70 + (Feature Key number: 1 - 4) + (PSTN, IP Trunk or Trunk Group number)*

---

## Hold/Resume/Navigation in Calls

Trunk and Intercom calls can be placed on hold at any extension. While on hold, a caller will hear Music On Hold. You will also receive a muted ring every 60 seconds on the handset/headset/speaker to remind you that there is a call on hold.

### **Hold a Call**

After you receive a call, press the HOLD button to hold a call.

### **Resume a Held Call**

You can resume a held call by using the soft key under the "Resume" label on the LCD. The call will return to the connected status.

### **Navigation in Calls**

You can jump between two calls by using the navigator control key. Press the UP or Down arrow to toggle between the two calls.

#### ***For a Single Line phone:***

*To place a call on hold ... press FLASH then hang up (optional).*

*To return to the original call ... press FLASH or pick up the phone.*

---

## Last Number Redial (LNR)

The Last Number Redial feature automatically dials the last number dialed from the phone.

Press the REDIAL button to dial the last number automatically. If the phone is on hook, it will pickup in handsfree mode automatically and perform handsfree dialing.

***For the Single Line phone:***

Dial \*8.

---

## LCD & Interactive Buttons

The IP2007 phone is equipped with a Liquid Crystal Display to enhance features operation. The IP2007 also incorporates four-screen-prompt and interactive soft keys that simplify feature operation.

---

## Mute

The Mute feature allows the user to disable the handset transmitter or the speakerphone microphone.

*To mute the microphone during a call ...* press the MUTE button. The button will illuminate to indicate that the microphone has been muted.

*To disable the Mute function ...* press the MUTE button again to re-enable the microphone.

---

## On Hook Dialing

IP2007 phone extensions may make outgoing calls without lifting the handset and monitor the dialing status through the built-in speaker. The button lamp is lit when dialing.

---

## Page Allow/Deny

You can block one-way pages (internal, group, and all page) over the IP phone speaker by dialing the Page Deny code.

Feature Code Access

*To enable Paging ...* dial \*99

*To disable Paging ...* dial \*\*99

---

## Phone Book

The *Xcelerator IP* provides users with a Phone Book, with each entry containing a user programmed Phone Number and User Name. The phone number can be an extension number, phone number, or IP address. Up to 400 entries per station user is supported.

### Phone & Web Access

- » *Phone Menu* = Left soft key to *CONFIG* > ✓ key > ▼ arrow to 12. Phone Book
- » *Web Menu* = Login > Phone Book tab > enter a party's name and number in order for Caller ID to display on incoming calls

---

## Place a Call

There are various ways to place a call:

- ☐ Lift the handset and dial the number pad as a regular phone.
- ☐ Press the SPEAKER button to perform handsfree dialing.
- ☐ Press the HEADSET button to perform headset dialing.
- ☐ Press a LINE button to pickup a specific line.
- ☐ Dial directly, the phone will automatically pickup in handsfree mode and perform handsfree dialing.

*To speed up the calling process... you can press the pound [#] key or the [OK] key after dialing the phone number.*

---

## Register to a Server

The phone should be configured before it can perform some basic functions. Although the phone can make a peer to peer VOIP call (the user must remember the IP address of the called party), it is desirable to have a centralized server to provide the directory service. This server can be a soft-switch, an IP-PBX, or a simple proxy.

The server has two basic functions:

- 1) The first is to track active phones and their IP address.
- 2) The second is passing signaling messages between communication parties.

To make your phone reachable in this VOIP network, your phone has to register to the server so that when someone dials your phone number the server knows where you are and informs your IP phone that someone is calling.

### Phone & Web Access

- » *Phone Menu* = Left soft key to *CONFIG* > ✓ key > ▼ arrow to 16. Admin > SIP
- » *Web Menu* = Login + SIP tab (refer to ["SIP Page" on page 5-10](#))

## Speakerphone/Headset/Handset

There are 3 major input/output devices on this phone. To switch between these devices, follow the audio path transitions described below:

**Handset to Handsfree** -- You are using the handset and want to switch to handsfree talking. Press the SPEAKER button, then place the handset on hook. *NOTE:* The voice will not switch to speakerphone until you place the handset on hook.

**Handset to Headset** -- You are using the handset and want to switch to the headset. Press the HEADSET button, then place the handset on hook. *NOTE:* The voice will not switch to headset until you place the handset on hook.

**Handsfree to Handset** -- You are using handsfree talking and want to switch to the handset. Lift the handset off hook and the voice will switch to handset immediately.

**Handsfree to Headset** -- You are using handsfree talking and want to switch to the headset. Press the HEADSET button, the voice will switch to headset immediately.

**Headset to Handset** -- You are using the headset and want to switch to handset. Lift the handset off hook and the voice will switch to handset immediately.

**Headset to Handsfree** -- You are using the headset and want to switch to handsfree talking. Press the SPEAKER button and the voice will switch to speakerphone immediately.

---

## Speed Dial

Speed Dialing allows you to store frequently dialed numbers. You can preset 10 speed dial numbers for fast dialing. Use the following steps to use speed dial:

1. Lift the handset.
2. You will see "SPD" on the LCD menus. Press the soft key corresponding to the LCD menu display.
3. You will see "SpeedDial:\_" on the LCD display. Enter a valid speed dial bin number (0-9) and the IP phone will dial out with the number that is preset in the IP phone.

### Phone & Web Access

- » *Phone Menu* = Left soft key to *CONFIG* > ✓ key > ▼ arrow to 13. Speed Dial
- » *Web Menu* = Login > Personal tab > Speed Dial Entry Settings

---

## Transfer

Transfer redirects a connected call. You can use a Blind or Supervised transfer method to transfer the call to an extension or an outside phone number.

### *Blind Transfer*

#### ***While on a call:***

1. Press the TRANSFER key to transfer the call.
2. Dial the desired phone number and the call will transfer automatically.
3. Hang up to release the line.

## Supervised Transfer

### **While on a call:**

1. Press the HOLD key to hold this call.
2. Press the DOWN arrow of the navigation control key to start a 2nd call on this line.
3. Dial the desired phone number. You will hear a ring back tone.
4. When the called party answers, advise them of the call being transferred.
5. Press the TRANSFER key and hang up. The Supervised Transfer is complete.

### **For a Single Line phone:**

*To Transfer a Call ...* press FLASH, & dial the new number.

*To Transfer Immediately ...* hang up (Unscreened).

*To Transfer with Consultation ...* wait for party to answer, consult, & hang up (Screened).

*To Abort a Transfer* (if 3rd party does not answer) ... press FLASH to return to original call.

## Voice Mail Access

The System Administrator must set up the Voice Mail access number on the web before a user can access their voice mailbox. You will find the "MSG number" field blank; enter an appropriate number.

If you have voice mail in your voice mailbox, you will see a voice mail icon (envelope) on the left top corner of the LCD. Press the MESSAGE button to access your voice mail.

*The Total Recording Message Time for one extension depends on how many extensions are connected to the Xcelerator IP. (See current members in the Phone Extension Table.) The current Xcelerator IP configuration allows 240 minutes of recording time.*

*Recording Time Per Extension = (240 minutes) divided by (Total Members)*

## Volume Control

The IP2007 phone is equipped with a volume control that is used to adjust the various volume settings of the telephone. The following functions can be adjusted:

- ☐ Ringing volume level
- ☐ Handset volume level
- ☐ Speaker volume level
- ☐ Headset volume level

---

# 5 Xcelerator IP Configuration

The *Xcelerator IP* Configuration chapter shows the Web interface you will use to set up your system. Each section describes the available settings and how to define the parameters.

---

## System Setup

Connect a PC to the *Xcelerator IP*. This connection can be either via a wireless NIC or via a LAN connection to an Ethernet port on the *Xcelerator IP* gateway.

### *Xcelerator IP Default Settings*

*LAN IP Address:* 192.168.1.1

*WAN IP Address:* 192.168.10.210

*Web Login:* user name = admin; password = admin

### *Establishing a Connection*

#### **1 - Entering the Web Address**

After entering the IP address of the *Xcelerator IP* from your Web Browser, a dialog box will pop up to request the user to enter user name and password.

#### **2 - Logging In**

Enter the administrator user name/ password into the fields and click the OK button. (The default user name/password is admin/admin).

Once the user name and password have been verified, the "*Xcelerator IP*" home page will display in your browser window as shown here -->

### 3 - Selecting Advanced Setup

When selecting "Advanced Setup" on the *Xcelerator IP* home page, the "Device Info - Summary" options will display as shown in the "Summary Settings" section below. The Web Configuration of the *Xcelerator IP* is divided into the following six categories:

- ☐ Device Info
- ☐ Advanced
- ☐ Wireless
- ☐ Voice
- ☐ Management
- ☐ Diagnostics

Each of these categories expand to display additional programming interface screens, as required, for each specific area.

### *Device Info (System Status)*

The Device Info page provides overview information that reflects the current status of *Xcelerator IP* connection. The main page shows the current hardware and software version information, as well as the IP network addressing scheme for the *Xcelerator IP*. The Device Info page contains four subcategories that include the following topics:

- ☐ Summary
- ☐ Statistics
- ☐ Route
- ☐ ARP

### Summary Info

The Summary section details the current software version IP address for the system. It also includes Version Info and Network Info as shown below.

## Statistics Info (Network)

The Statistics section contains default traffic to and from the LAN and WAN interfaces of the *Xcelerator IP*.

## Route Info

The Route section lists the IP route information programmed on the *Xcelerator IP*.

## ARP Info

The ARP (Address Resolution Protocol) section shows an ARP table which maps IP network addresses to hardware addresses used by data link level protocol.

## Advanced Settings

The Advanced Setup section allows a system administrator to configure the following topics:

LAN

WAN

Route

- Static Route
- RIP

NAT

- Virtual Servers
- Port Trigger
- DMZ

Security

- Incoming Filtering
- Outgoing Filtering
- Parental Service

Quality of Service

- Traffic Class
- Bandwidth Control

Dynamic DNS

## LAN Parameters

The LAN section allows you to set LAN IP and Subnet Mask for the LAN interface. You can also enable or disable DHCP Server and configure related settings for that mode.

» If necessary, check the "Secondary IP" to configure the secondary IP address and Subnet Mask for LAN interface. This IP address is used for management only.

The screenshot displays the 'Xcelerator IP' configuration web interface. On the left is a vertical navigation menu with the 'VERTICAL' logo at the top. The menu items are: 'Device Info', 'Advanced' (expanded), '- LAN' (highlighted with a red circle), '- VLAN', '- Route', '- Nat', '- Security', '- Quality of Service', '- Dynamic DNS', 'Wireless', 'Voice', 'Management', 'Diagnostics', and 'Logout'. The main content area is titled 'Configure Router IP Address and Subnet Mask for LAN interface'. It contains two sections: a primary configuration section and a 'Dhcp Info' section. The primary section has input fields for 'IP Address' (172.16.15.10) and 'Subnet Mask' (255.255.240.0). The 'Dhcp Info' section has radio buttons for 'Disable DHCP Server' (selected) and 'Enable DHCP Server'. Below these are input fields for 'Start IP Address', 'End IP Address', and 'Leased Time (hour)'. A checkbox labeled 'Configure the second IP Address and Subnet Mask for LAN interface' is checked. Below this checkbox are input fields for a secondary 'IP Address' and 'Subnet Mask'. At the bottom of the main area are three buttons: 'Reboot', 'Save Settings', and 'Cancel Changes'.

## WAN Parameters

There are three options available for setting the WAN IP address:

- ☐ Static IP mode
- ☐ DHCP mode
- ☐ PPPoE mode

You can also enable or disable Firewall and IGMP.

- When the Firewall option is selected, firewall settings are configured in the Security directory. If the firewall settings selection is disabled, the Security directory will be disabled.
- Network Address Translation (NAT) allows you to share one Wide Area Network (WAN) IP address for multiple computers on your Local Area Network (LAN). In *Xcelerator IP*, NAT is enabled by default and is not displayed on the page to prevent it from being disabled.

### Static IP

The Static IP selection shows the current existing WAN interfaces in the system for Static IP mode.

The screenshot displays the Xcelerator IP configuration web interface. On the left is a navigation menu with the following items: Device Info, Advanced, WAN (highlighted with a red circle), Route, Nat, Security, Quality of Service, Dynamic DNS, Wireless, Voice, Management, Diagnostics, and Logout. The main content area is titled 'IP Settings' and features a dropdown menu set to 'Static IP' (circled in blue). Below this, the following settings are displayed in a table-like format:

Internet IP Address:	172.16.15.10
Subnet Mask:	255.255.240.0
Gateway:	172.16.1.1
Static DNS 1:	172.16.2.100
Static DNS 2:	172.16.2.101

Below the IP settings is a section titled 'Wan Services' containing two checkboxes: 'Enable Firewall' (checked) and 'Enable IGMP' (unchecked). At the bottom of the interface are three buttons: 'Reboot', 'Save Settings', and 'Cancel Changes'.

### Automatic Configuration (DHCP)

The Automatic Configuration selection shows the current existing WAN interfaces in the system for DHCP mode.

The screenshot shows the Xcelerator IP configuration interface. On the left is a sidebar with a tree view containing: Device Info, Advanced, LAN, WAN (highlighted with a red circle), Route, Nat, Security, Quality of Service, Dynamic DNS, Wireless, Voice, Management, Diagnostics, and Logout. The main panel is titled 'Xcelerator IP' and 'IP Settings'. A dropdown menu is set to 'Automatic Configuration - DHCP' (circled in blue). Below this, there are radio buttons for 'Automatic Assigned DNS' (unselected) and 'Static DNS' (selected). The 'Static DNS' section has two text boxes: 'Primary DNS server:' with the value '172.16.2.100' and 'Secondary DNS server:' with the value '172.16.2.101'. Under the 'Wan Services' section, there are checkboxes for 'Enable Firewall' (checked) and 'Enable Igmp' (unchecked). At the bottom are three buttons: 'Reboot', 'Save Settings', and 'Cancel Changes'.

### PPPoE

The PPPoE selection shows the current existing WAN interfaces in the system for PPPoE mode.

The screenshot shows the Xcelerator IP configuration interface with the 'IP Settings' dropdown set to 'PPPoE' (circled in blue). The sidebar is the same as in the previous screenshot, with 'WAN' highlighted. The main panel contains a text box explaining: 'PPP usually requires that you have a user name and password to establish your connection. In the boxes below, enter the user name and password that your ISP has provided to you.' Below this are three input fields: 'PPP Username:', 'PPP Password:', and 'Authentication Method:' (set to 'AUTO'). There are also radio buttons for 'Automatic Assigned DNS' (unselected) and 'Static DNS' (selected). The 'Static DNS' section has two text boxes: 'Primary DNS server:' with the value '172.16.2.100' and 'Secondary DNS server:' with the value '172.16.2.101'. Under the 'Wan Services' section, there are checkboxes for 'Enable Firewall' (checked) and 'Enable Igmp' (unchecked). At the bottom are three buttons: 'Reboot', 'Save Settings', and 'Cancel Changes'.

## Route

The Routing options are separated into two parts: Static Route and RIP (Routing Information Protocol).

### Static Route (Add)

- On the Routing page, click on the ADD button to create a new Static Route.
- Enter the destination network address, subnet mask, gateway AND/OR available WAN interface, then click "Save Settings" to add the entry to the routing table.
- A maximum of 32 entries may be configured.

**VERTICAL** Xcelerator IP

**Routing -- Static Route Add**

Enter the destination network address, subnet mask, gateway AND/OR available WAN interface then click "Save Settings" to add the entry to the routing table.

Destination Network Address:

Subnet Mask:

☐ Use Gateway IP Address

☒ Use Interface

### RIP

- To activate RIP for a device, select the "Enabled" radio button for Global RIP Mode.
- To configure an individual interface (br0 or eth0), select the desired RIP version (1, 2 or Both) and the mode of operation (Active or Passive), then click the "Enabled" checkbox for the desired interface.
- Click the "Save Settings" button to save the configuration and to start or stop RIP based on the Global RIP mode selected.

**VERTICAL** Xcelerator IP

**Routing -- RIP Configuration**

To activate RIP for the device, select the 'Enabled' radio button for Global RIP Mode. To configure an individual interface, select the desired RIP version and operation, followed by placing a check in the 'Enabled' checkbox for the interface. Click the 'Save Settings' button to save the configuration, and to start or stop RIP based on the Global RIP mode selected.

**Global RIP Mode** ☒ Disabled ☐ Enabled

Interface	Version	Operation	Enabled
br0	2	Active	<input type="checkbox"/>
eth0	2	Passive	<input type="checkbox"/>

## NAT

The NAT option is separated into three parts:

- ☐ Virtual Servers
- ☐ Port Trigger
- ☐ DMZ

### Virtual Servers

The Virtual Servers section allows you to direct incoming traffic from the WAN side (identified by Protocol, IP address and service port) to the internal server with a private IP address on the LAN side.

**NAT -- Virtual Servers**

Select the service name, and enter the server IP address and click "Save Settings" to forward IP packets for this service to the specified server. **NOTE: The "Internal Port End" cannot be changed. It is the same as "External Port End" normally and will be the same as the "Internal Port Start" or "External Port End" if either one is modified.**

Server Name: ☐ Select a Service:  ☐ Custom Server:

Server IP Address:

External Port Start	External Port End	Protocol	Internal Port Start	Internal Port End
		TCP		
		TCP		
		TCP		
		TCP		
		TCP		
		TCP		
		TCP		
		TCP		
		TCP		
		TCP		
		TCP		
		TCP		
		TCP		
		TCP		

### Port Trigger

Certain applications require that specific port(s) in the Router's firewall be opened for access by the remote parties. Port Trigger dynamically opens up the "Open Ports" in the firewall when an application on the LAN initiates a TCP/UDP connection to a remote party using the "Triggering Ports". The Router allows the remote party from the WAN side to establish new connections back to the application on the LAN side using the "Open Ports". A maximum 32 entries can be configured.

**VERTICAL** Xcelerator IP

#### NAT -- Port Triggering

Some applications such as games, video conferencing, remote access applications and others require that specific ports in the Router's firewall be opened for access by the applications. You can configure the port settings from this screen by selecting an existing application or creating your own (Custom application) and click "Save Settings" to add it.

Remaining number of entries that can be configured: 32

Application Name:

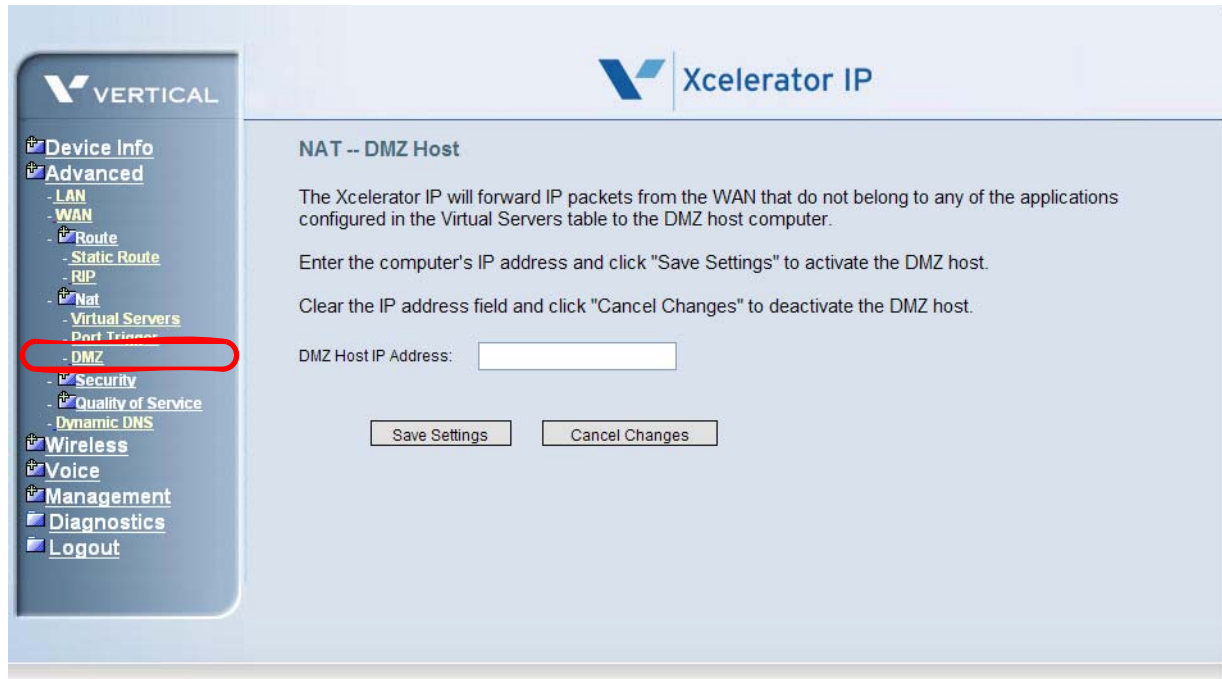

☒ Select an application:

☐ Custom application:

<input type="text"/>	<input type="text"/>	TCP	<input type="text"/>	<input type="text"/>	TCP
<input type="text"/>	<input type="text"/>	TCP	<input type="text"/>	<input type="text"/>	TCP
<input type="text"/>	<input type="text"/>	TCP	<input type="text"/>	<input type="text"/>	TCP
<input type="text"/>	<input type="text"/>	TCP	<input type="text"/>	<input type="text"/>	TCP

### DMZ

The *Xcelerator IP* will forward IP packets from the WAN that do not belong to any of the applications configured in the Virtual Servers table to the DMZ host computer.

## Security

The Security configuration is shown only when the WAN page Security options is selected. The Security directory is separated into three parts:

- ☐ Incoming Filter
- ☐ Output Filter
- ☐ Parental Control

### Incoming Filter

The Incoming Filter allows the user to create a filter rule to identify incoming IP traffic by specifying a new filter name and at least one condition. All specified conditions in this filter rule must be satisfied for the rule to take effect.

By default, all incoming IP traffic from the WAN will be blocked if it is not consistent with the incoming filter rules. However, *Xcelerator IP* will open some necessary ports such as a Web port, SIP ports and RTP ports to ensure that voice applications will be able to communicate.

The screenshot displays the 'Xcelerator IP' configuration interface. On the left, a sidebar menu lists various settings: Device Info, Advanced (with sub-items LAN, WAN, Route, NAT, Security, Incoming Filter, Output Filter, Parental Control, Quality of Service, and Dynamic DNS), Wireless, Voice, Management, Diagnostics, and Logout. The 'Security' option is expanded, and 'Incoming Filter' is highlighted with a red circle. The main content area is titled 'Add IP Filter -- Incoming'. It includes a descriptive paragraph: 'IP Incoming Filtering allows you to create a filter rule to identify incoming IP traffic by specifying a new filter name and at least one condition below. All of the specified conditions in this filter rule must be satisfied for the rule to take effect. Click 'Save Settings' to save and activate the filter.' Below this text are input fields for: Filter Name (text box), Protocol (dropdown menu), Source IP address (text box), Source Subnet Mask (text box), Source Port (port or port:port) (text box), Destination IP address (text box), Destination Subnet Mask (text box), and Destination Port (port or port:port) (text box). At the bottom of the form are two buttons: 'Save Settings' and 'Cancel Changes'.

### Output Filter

The Output Filter allows the user to create a filter rule to identify outgoing IP traffic by specifying a new filter name and at least one condition below. All specified conditions in this filter rule must be satisfied for the rule to take effect.

The screenshot displays the Xcelerator IP configuration interface. On the left is a sidebar with a tree view containing the following items: Device Info, Advanced (expanded), LAN, WAN, Route, NAT, Security, Incoming Filter, **Output Filter** (highlighted with a red circle), Firewall, Quality of Service, Dynamic DNS, Wireless, Voice, Management, Diagnostics, and Logout. The main content area has the 'Xcelerator IP' logo at the top right. Below the logo, a text box explains: 'The screen allows you to create a filter rule to identify outgoing IP traffic by specifying a new filter name and at least one condition below. All of the specified conditions in this filter rule must be satisfied for the rule to take effect. Click 'Save Settings' to save and activate the filter.' Below this text are several input fields: 'Filter Name:' (text box), 'Protocol:' (dropdown menu), 'Source IP address:' (text box), 'Source Subnet Mask:' (text box), 'Source Port (port or port:port):' (text box), 'Destination IP address:' (text box), 'Destination Subnet Mask:' (text box), and 'Destination Port (port or port:port):' (text box). At the bottom of the form are two buttons: 'Save Settings' and 'Cancel Changes'.

### Parental Control

The Parental Control section adds time restrictions to a special LAN device connected to the Router. The 'Browser's MAC Address' automatically displays the MAC address of the LAN device where the browser is running.

- To restrict other LAN devices, click the "Other MAC Address" button and enter the MAC address of the other LAN device.
- A maximum of 16 entries may be configured.

**VERTICAL** Xcelerator IP

**Device Info**  
**Advanced**  
- LAN  
- WAN  
- Route  
- NAT  
- Security  
- Incoming Filter  
- Output Filter  
**- Parental Control**  
- Quality of Service  
- Dynamic DNS  
**Wireless**  
**Voice**  
**Management**  
**Diagnostics**  
**Logout**

### Time of Day Restriction setup

This page adds time of day restriction to a specific LAN device connected to the Router. The 'Browser's MAC Address' automatically displays the MAC address of the LAN device where the browser is running. To restrict another LAN device, click the "Other MAC Address" button and enter the MAC address of the other LAN device. To find out the MAC address of a Windows based PC, go to command window and type "ipconfig /all".

User Name

☒ Browser's MAC Address   
☐ Other MAC Address

Days of the week	Mon	Tue	Wed	Thu	Fri	Sat	Sun
Click to select	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Start Blocking Time (hh:mm)

End Blocking Time (hh:mm)

### Quality of Service (QOS)

The Quality of Service section is separated into two parts:

- ☐ Traffic Class
- ☐ Bandwidth Control

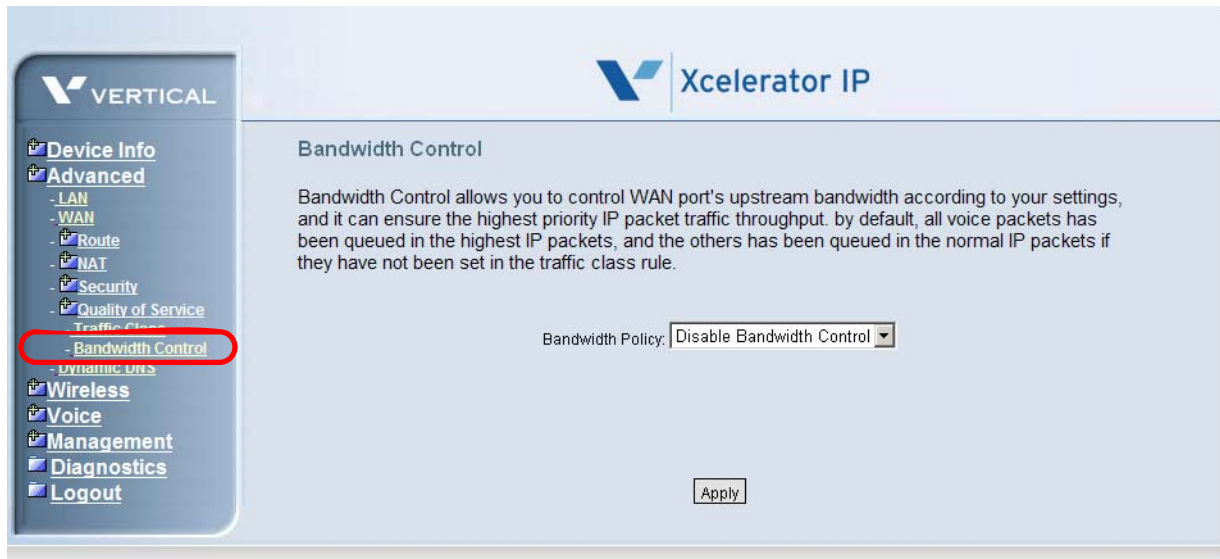

#### Traffic Class

- Click on the ADD button to create a Traffic Class to identify the IP traffic by specifying at least one condition. If multiple conditions are specified, all of them should be satisfied to make sure the rule will take effect.
- IP QOS is applied to the traffic from LAN to WAN; traffic from WAN to LAN will not have QOS assigned to the incoming packets.
- Enter the QOS class name for this policy. Define the priority for this policy, and the priority will be used by the Bandwidth Control setting. *Xcelerator IP* will modify the IP header with new IP Precedence and/or IP Type of Service fields.
- Traffic Class is an IP Layer QOS policy. At least (but not limited to) one condition must be configured.

The screenshot displays the 'Xcelerator IP' configuration interface. On the left is a sidebar with a tree view containing the following items: Device Info, Advanced (expanded), LAN, WAN, Route, NAT, Security, Quality of Service (expanded), Traffic Class (highlighted with a red circle), Bandwidth Control, Dynamic DNS, Wireless, Voice, Management, Diagnostics, and Logout. The main content area is titled 'Add Network Traffic Class Rule'. It includes a descriptive paragraph: 'Traffic Class Rules create a traffic class to classify the upstream traffic, assign queuing priority and optionally overwrite the IP header TOS byte. A rule consists of a class name and at least one condition below. All of the specified conditions in this classification rule must be satisfied for the rule to take effect. Click 'Save Settings' to save and activate the rule.' Below this text are several input fields: 'Traffic Class Name' (text box), 'Priority' (dropdown menu), 'IP Precedence' (dropdown menu), 'IP Type Of Service' (dropdown menu), 'Protocol' (dropdown menu), 'Source IP Address' (text box), 'Source Subnet Mask' (text box), 'Source Port (port or port:port)' (text box), 'Destination IP Address' (text box), 'Destination Subnet Mask' (text box), and 'Destination Port (port or port:port)' (text box). At the bottom of the form are two buttons: 'Save Settings' and 'Cancel Changes'.

### Bandwidth Control

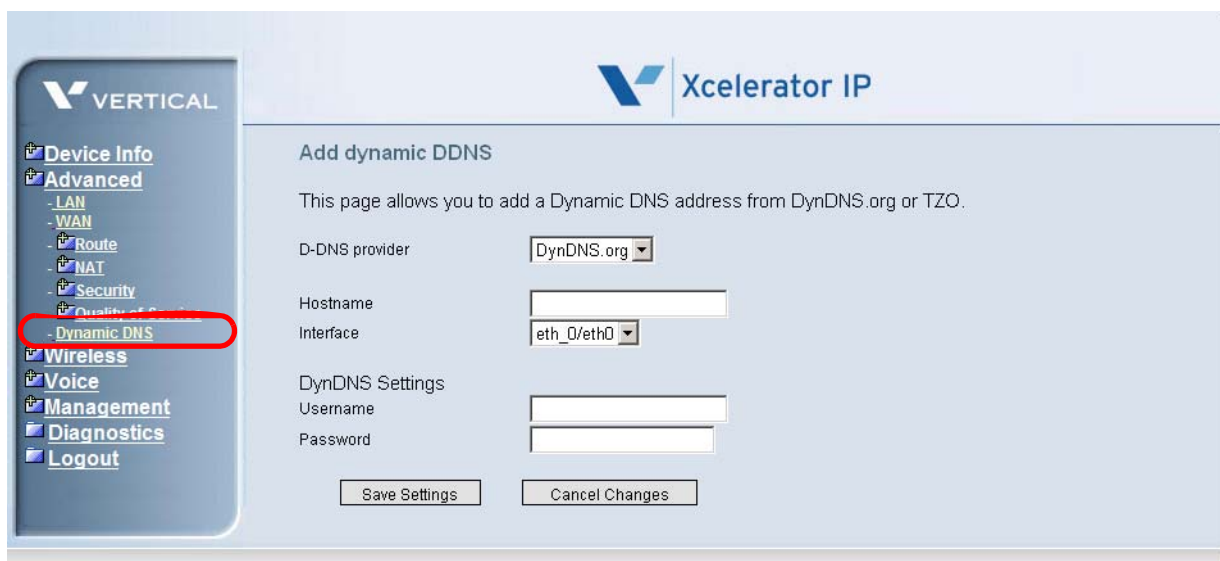

The Bandwidth Control section allows you to control the WAN port upstream bandwidth in accordance with user configured settings. Bandwidth Control can ensure the highest priority IP packet traffic first. By default, all voice packets have been queued in the highest priority IP packets. Other types have been queued in the normal IP packets if they have not been set in the priority field of the traffic class rule.

### Dynamic DNS Menu

The Dynamic DNS service allows you to alias a dynamic IP address to a static host name in any of the many domains, allowing your DSL router to be more easily accessed from various locations on the Internet.

You must be working with the Server or visit the website for instructions.

## Wireless Settings

The Wireless directory is used to configure the *Xcelerator IP* for wireless access. It is separated into 6 parts:

- ☐ Basic
- ☐ Security
- ☐ MAC Filter
- ☐ Wireless Bridge
- ☐ Advanced
- ☐ Station Info

### Wireless - Basic Parameters

The Wireless Basic setting allows the user to configure the basic features of the wireless LAN interface. You can enable or disable the wireless LAN interface, hide the network from active scans, set the wireless network name (also known as SSID) and restrict the channel set based on country requirements.

The screenshot shows the Xcelerator IP configuration interface. On the left is a sidebar with a menu: Device Info, Advanced, Wireless (highlighted with a red circle), Voice, Management, Diagnostics, and Logout. The 'Wireless' section is expanded, showing sub-items: Basic, Security, Mac Filter, Wireless Bridge, Advanced, and Station Info. The main content area is titled 'Xcelerator IP' and 'Wireless Basic'. It contains a descriptive paragraph, a 'Wireless Basic' section with two checkboxes ('Enable Wireless' checked, 'Hide Access Point' unchecked), and three input fields: 'SSID' (containing 'Xcelerator'), 'BSSID' (containing '00:03:C9:06:E4:9B'), and 'Country' (a dropdown menu set to 'UNITED STATES'). At the bottom are three buttons: 'Reboot', 'Save Settings', and 'Cancel Changes'.

## Wireless - Security Parameters

The Wireless Security page allows the user to configure the security features of the wireless LAN interface. Wireless Security allows you to perform the following functions:

- ❑ Programming of the network authorization method.
- ❑ Selection of the data encryption method.
- ❑ Specify if a network key is required to authenticate to this wireless network.
- ❑ Specify the encryption strength.

The following security items are configured on the page:

**Network Authentication** -- Sets the network Authentication method. 802.1X and WPA require the user to set valid RADIUS parameters. WPA-PSK requires a valid WPA Pre-Shared Key to be set.

**802.1X** -- As the IEEE standard for access control for wireless and wired LANs, 802.1x provides a means of authentication and authorizing devices to attach to a LAN port. This standard defines the Extensible Authentication Protocol (EAP), which uses a central authentication server to authenticate each user on the network.

**WPA/WPA2** -- The Wi-Fi Alliance defines WPA/WPA2 as a data encryption method for 802.11 wireless LANs. WPA is an industry-supported, pre-standard version of 802.11i utilizing the Temporal Key Integrity Protocol (TKIP), which fixes the problems of WEP, including using dynamic keys.

**WPA/WPA2 Pre-Shared Key** -- Sets the WPA/WPA2 Pre-Shared Key (PSK).

**WPA/WPA2 Group Rekey Interval** -- Sets the WPA/WPA2 Group Rekey Interval in seconds. Leave this setting blank or set to zero to disable periodic re-keying.

**RADIUS Server** -- Sets the IP address of the RADIUS server to use for authentication and dynamic key derivation. Radius Server is responsible for receiving user connection requests, authenticating the user, and then returning all of the configuration information necessary for the client to deliver the server to the user.

**Radius Port** -- Sets the UDP port number of the RADIUS server. The port number is usually 1812 or 1645 and depends on the server.

**Radius Key** -- Sets the shared secret for the RADIUS connection.

**WEP Encryption** -- Selecting Disabled disables WEP data encryption. Selecting Enabled enables WEP data encryption and requires that a valid network key be set and selected unless 802.1X is enabled.

**WEP** (Wired Equivalent Privacy) -- WEP is a protocol for wireless LANs or local area networks. This WEP is defined in the 802.11 Standard. WEP is designed so security levels are maintained at the same level as the wired LAN. WEP's aim is to provide security by encrypting data over radio waves. WEP protects data as it's transmitted from one end point to another. WEP is used at two lowest layers, the data link and physical layer. WEP is designed to make up for the inherent security in wireless transmission as compared to wired transmission.

**Shared Key Authentication** -- Sets whether shared key authentication is required. A valid network key must be set and selected if required.

## Wireless - Mac Filter Parameters

The MAC Filter allows a user to Add/Remove hosts with the specified MAC addresses that are able or unable to access the wireless network.

- ☐ Allow option -- only the MAC addresses in the user-defined list can access the wireless network.
- ☐ Deny option -- only the user-specified MAC addresses are unable to access to wireless network.
- ☐ Disable option -- all users will be able to access to the wireless network.

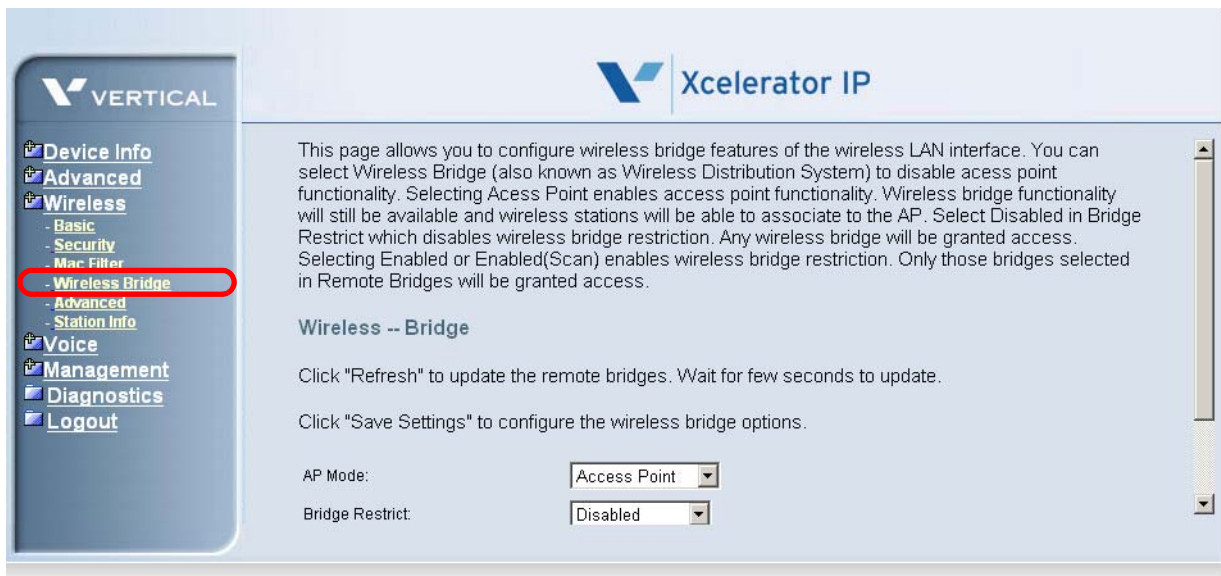

**NOTE** -- The MAC addresses in the list will take effect immediately when Allow or Deny is checked.

The screenshot shows the Xcelerator IP configuration interface. On the left is a vertical navigation menu with the 'VERTICAL' logo at the top. The menu items are: Device Info, Advanced, Wireless (expanded), Mac Filter (highlighted with a red circle), Wireless Bridge, Advanced, Station Info, Voice, Management, Diagnostics, and Logout. The main content area is titled 'Wireless -- MAC Filter' and features the Xcelerator IP logo. Below the title, it says 'Enter the MAC address and click "Apply" to add the MAC address to the wireless MAC address filters.' There is a text input field labeled 'MAC Address:' followed by two buttons: 'Save Settings' and 'Cancel Changes'.

## Wireless - Bridge Parameters

The Wireless Bridge will allow you to configure the wireless bridge features of the wireless LAN interface. You can select Wireless Bridge (also known as Wireless Distribution System) to disable access point functionality.

- Selecting **Access Point** enables access point functionality. Wireless bridge functionality will still be available, and allow wireless stations to associate to the AP.
- Selecting **Disabled** in "Bridge Restrict" will disable the wireless bridge restriction, allowing any wireless bridge to be granted access.
- Selecting **Enabled** or **Enabled (Scan)** enables wireless bridge restriction. Only those bridges defined in Remote Bridges will be granted access.

## Wireless - Advanced Parameters

The Wireless Advanced settings allow you to configure more advanced features of the wireless LAN interface. You can select a particular channel on which to operate, force the transmission rate to a particular speed, set the fragmentation threshold, set the RTS threshold, set the wakeup interval for clients in power-save mode, set the beacon interval for the access point, set XPress mode and set whether short or long preambles are used.

**Channel** -- Select the appropriate channel from the list provided to correspond with your network settings. All devices in your wireless network must use the same channel in order to function correctly.

**Rate** -- The default setting is Auto. The range is from 1 to 54Mbps. The rate of data transmission should be set depending on the speed of your wireless network. You can select from one transmission speed, or keep the default setting, Auto, to have the *Xcelerator IP* automatically use the fastest possible data rate.

**Multicast Rate** -- The default setting is 54Mbps. The range is from 1 to 54Mbps. The rate of data transmission should be set depending on the speed of your wireless network. You can select from one transmission speed, or keep the default setting, to have the *Xcelerator IP* automatically use the fastest data rate for multicast packets.

**Basic Rate** -- Select the basic rate that wireless clients must support.

**Fragmentation Threshold** -- This value should remain at its default setting of 2346. The range is 256-2346 bytes. The Fragmentation Threshold specifies the maximum size for a packet before data is fragmented into multiple packets. If you experience a high packet error rate, you may slightly increase the Fragmentation Threshold. Setting this value too low may result in poor network performance. Only minor modifications of this value are recommended.

This page allows you to configure advanced features of the wireless LAN interface. You can select a particular channel on which to operate, force the transmission rate to a particular speed, set the fragmentation threshold, set the RTS threshold, set the wakeup interval for clients in power-save mode, set the beacon interval for the access point, set XPress mode and set whether short or long preambles are used.

### Wireless -- Advanced

AP Isolation:	<input type="button" value="Off"/>
Band:	<input type="button" value="2.4GHz - 802.11g"/>
Channel:	<input type="button" value="11"/>
Rate:	<input type="button" value="Auto"/>
Multicast Rate:	<input type="button" value="Auto"/>
Basic Rate:	<input type="button" value="Default"/>
Fragmentation Threshold:	<input type="text" value="2346"/>
RTS Threshold:	<input type="text" value="2347"/>
DTIM Interval:	<input type="text" value="1"/>
Beacon Interval:	<input type="text" value="100"/>
XPress™ Technology:	<input type="button" value="Disabled"/>
54g™ Mode:	<input type="button" value="54g Auto"/>
54g Protection:	<input type="button" value="Auto"/>
WMM(Wi-Fi Multimedia):	<input type="button" value="Disabled"/>

**RTS Threshold** -- This value should remain at its default setting of 2347. The range is 0-2347 bytes. Should you encounter inconsistent data flow, only minor modifications are recommended. If a network packet is smaller than the packet RTS threshold size, the RTS/CTS mechanism will not be enabled. The *Xcelerator IP* sends Request of Send (RTS) frames to a particular receiving station and negotiates the sending of a data frame. After receiving an RTS, the wireless station responds with a Clear to Send (CTS) frame to acknowledge the right to begin transmission.

**DTIM Interval** -- The default value is 3. This value, between 1 and 255 milliseconds, indicates the interval of the Delivery Traffic Indication Message (DTIM). A DTIM field is a countdown field informing clients of the next window for listening to broadcast and multicast messages. When the router has buffered broadcast or multicast for associated clients, it sends the next DTIM with a DTIM Interval value. Its clients hear the beacons and awaken to receive the broadcast and multicast message.

**Beacon Interval** -- The default value is 100. Enter a value between 1 and 65535 milliseconds. The Beacon Interval value indicates the frequency interval of the beacon. A beacon is a packet broadcast by the router to synchronize the wireless network.

**XPress™ Technology** -- Select to enable/disable this proprietary mode.

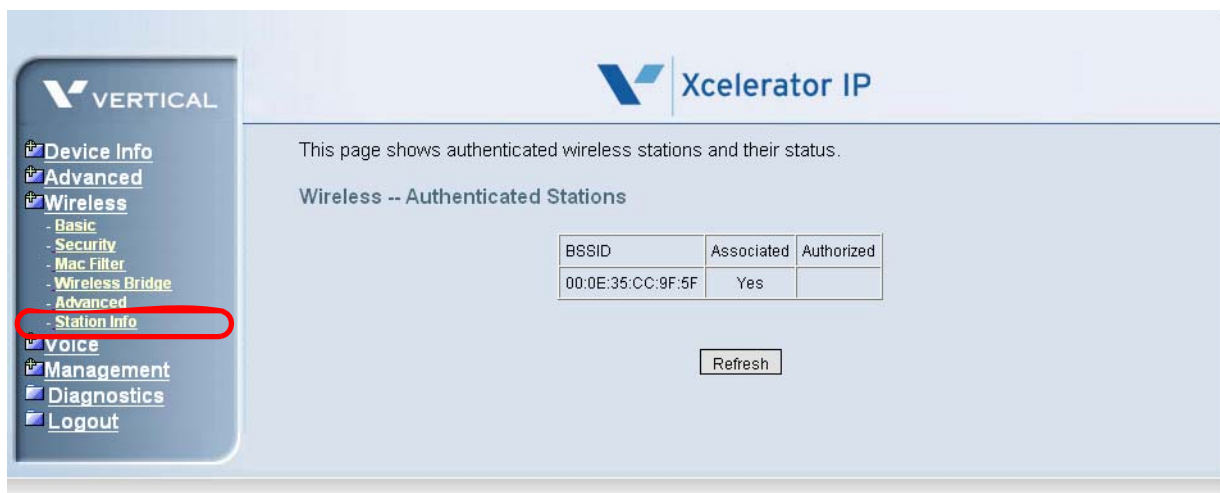

**54g™ Mode** -- Select the mode to 54g Auto for the widest compatibility. Select the mode to 54g Performance for the fastest performance among 54g certified equipment. Set the mode to 54g LRS if you are experiencing difficulty with legacy 802.11b equipment.

**54g protection** -- In Auto mode the *Xcelerator IP* will use RTS/CTS to improve 802.11g performance in mixed 802.11g/802.11b networks. Turn protection off to maximize 802.11g throughput under most conditions.

**WMM (WiFi Multimedia)** -- Select to enable/disable the support.

## Wireless - Station Info Menu

The Wireless Station Info section shows authenticated wireless stations and their status.

The screenshot displays the Xcelerator IP web interface. On the left, a sidebar menu lists various configuration sections: Device Info, Advanced, Wireless (expanded), Voice, Management, Diagnostics, and Logout. Under the 'Wireless' section, 'Station Info' is selected and highlighted with a red circle. The main content area, titled 'Xcelerator IP', contains the text 'This page shows authenticated wireless stations and their status.' Below this, a section titled 'Wireless -- Authenticated Stations' features a table with the following data:

BSSID	Associated	Authorized
00:0E:35:CC:9F:5F	Yes	

A 'Refresh' button is located below the table.

## Voice Settings

The Voice section is used to configure the *Xcelerator IP* voice related parameters. The Voice section allows the system administrator to configure the following topics:

### Phone

- Phone Extension
- Extension Linekey

### Trunk

- IP Trunk
- Trunk Group
- Answering Positions
- Call Restriction Table
- Call Routing Table

### System

- Numbering Plan
- Service Mode
- Transmission
- IG Dynamic Discovery
- IG Expansion Table

### Voice Mail

- General
- Extension
- Holiday
- Advanced

## Phone Menu

The Phone extension screen is used to configure the *Xcelerator IP* phone extension authentication, and the IP2007 Phone extension line key default setting.

### Phone Extension

The *Xcelerator IP* combines Proxy and Registrar servers in its application. All phones registered to the internal Registrar are set here.

This page allows you to configure the authentication for SIP client.

#### Sip Authentication

No.	Phone Number	Password	Day COS	Night COS
1	100	1610507213	0	0
2	101	2075546551	0	0
3	102	1156506846	0	0
4	103	544321847	0	0
24				

FXS Phone Start Number: 125 Day COS: 0 Night COS: 0

#### Registration Configuration

Minimal Expire: 60  
SIP Port: 5060

Reboot Save Settings Cancel Changes

**SIP Authentication:** Up to 24 IP phones can be registered.

- **Phone Number** -- The phone number is a station number. If it conflicts with the setting in Numbering Plan, the registration will fail and the *Xcelerator IP* will not add the phone or make the change. The Phone number value range is limited by Start Extension Number and End Extension Number settings in the Numbering Plan page.
- **Password** -- The user password of this phone. The length is up to 24 digits or characters. The password is used for Digest Authentication.
- **Day COS** -- This field assigns a Class of Service for day mode operation. Acceptable values are 0-7. At default, all extensions are unrestricted.
- **Night COS** -- This field assigns a Class of Service for night mode operation. Acceptable values are 0-7. At default, all extensions are unrestricted.
- **FXS Phone Start Number** -- This value displays shows the FXS phone number. The FXS phone number is programmed in System - Numbering Plan.

### Registration Configuration

- *Minimal Expire* -- defines the minimum refresh interval registrar time supported for these IP phones managed by the *Xcelerator IP*.
- *SIP Port* -- The *Xcelerator IP* listens for requests on the SIP port. This port is used for UDP application and 5060 is its recommended value. The default value is 5060.

### Extension Linekey

The Extension linekey section allows a user to configure the default settings for the IP2007 phone Linekeys. When an IP2007 phone is registering to the *Xcelerator IP*, the *Xcelerator IP* will send these settings to the phone.

### Trunk Menu

The Trunk screen is used to configure the PSTN/IP Trunk function related parameters. It is separated into 5 parts:

- ❑ IP Trunk
- ❑ Trunk Group
- ❑ Answering Positions
- ❑ Call Restriction Table
- ❑ Call Routing Table

## IP Trunk

The IP Trunk page allows you to configure the proxy and registration server of IP Trunk; up to 8 lines of IP Trunk are supported.

**VERTICAL** Xcelerator IP

This page allows you to configure the proxy and registration of IP Trunk, up to 8 lines of IP Trunk are supported.

**Subscriber Information**

**IP Trunk 1**

Phone Number  Register Expires

Auth ID  Auth Password

SIP Proxy  Port

Outbound Proxy  Port

**IP Trunk 8**

Phone Number  Register Expires

Auth ID  Auth Password

SIP Proxy  Port

Outbound Proxy  Port

**Local Port**

Local SIP Port for IP Trunk

Local RTP Port for IP Trunk

### Subscriber Information

- *Trunk Number* -- The assigned trunk number from Uplink Server.
- *Register Expires* -- how long the *Xcelerator IP* will send the REGISTER command to an uplink registrar server. The values are set in seconds.
- *Auth ID* -- The Account ID of an uplink server used for Digest Authentication.
- *Auth Password* -- The Password to an uplink server used for Digest Authentication.
- *SIP Proxy* -- The address of an uplink registrar server (for Inbound Calls). Digital IP address and domain name are all supported.
- *SIP Proxy Port* -- SIP signal port of an uplink registrar server.
- *Outbound Proxy* -- The address of an uplink outbound proxy server (for Outbound Calls). All SIP request packets will be sent to this server which will determine their next hops.
- *Outbound Proxy Port* -- SIP signal port of an uplink outbound proxy server.

### Local Port

- *Local SIP Port for IP Trunk* -- SIP control signal packet Port of IP Trunk Client.
- *Local RTP Port for IP Trunk* -- Real-Time Protocol packet Port of IP Trunk Client. This port is the Start RTP port address for these IP Trunks.

### Using Cbeyond Beyond Voice™ Connect Service

The following instructions are for those customers that wish to use Cbeyond Beyond as their SIP trunk provider.

*To setup the SIP trunks:*

1. From the main *Xcelerator IP* Web page, click Voice > Trunk > IP Trunk. The Subscriber Information screen will display.
2. Complete the phone number field with the number provided to you by Cbeyond. This is usually the same as your user name.
3. Enter the "Auth ID" and "Auth Password" with the user name and password for Digest Challenge provided to you by Cbeyond.
4. Fill in the "SIP Proxy" area with the Proxy Server that is provided to you by Cbeyond (sipconnect-fca.atl0.cbeyond.net)
5. Leave the "Register Expires" and the "Port" information at their default values unless you receive further instructions from Technical Support.

Subscriber Information		"Cbeyond Beyond Configuration"	
IP Trunk 1			
Phone Number	<input type="text" value="4445551234"/>	Register Expires	<input type="text" value="60"/>
Auth ID	<input type="text" value="4445551234"/>	Auth Password	<input type="password" value="••••••••••"/>
SIP Proxy	<input type="text" value="nect-fca.atl0.cbeyond.net"/>	Port	<input type="text" value="5060"/>
Outbound Proxy	<input type="text"/>	Port	<input type="text" value="5060"/>

### Trunk Group

The Trunk Group feature allows you to configure the virtual Trunk Group. Up to 4 Trunk Groups are supported.

#### Trunk Group & Label

Trunk Group and Label allows you to assign physical Trunks to virtual Trunk Groups you can configure a personal name or identifying name as an incoming Caller ID number. For three PSTN lines and eight IP lines, you can choose from Group 1 to Group 4.

#### Trunk Group Priority

Trunk Group Priority allows you to define the interior dialing priority of four (4) Trunk Groups. For each trunk group, "IP First" or "PSTN First" can be set to define which trunk type will be accessed when calls are placed through the specified trunk group.

The screenshot displays the Xcelerator IP configuration interface. On the left is a navigation menu with categories: Device Info, Advanced, Wireless, Voice, System, Management, Diagnostics, and Logout. Under the Voice category, 'Trunk Group' is highlighted with a red circle. The main content area is titled 'Trunk Group & Label' and includes a descriptive text: 'Trunk Group assignment allows you to assign a physical Trunk to a virtual Trunk Group.' Below this is a table for configuring individual trunks:

Trunk Line	Group Assign	Enable Label	Label Name
PSTN Line 1	Group 1	Disable	
PSTN Line 2	Group 1	Disable	
PSTN Line 3	Group 1	Disable	
IP Line 1	Group 2	Disable	
IP Line 8	Group 2	Disable	

A red arrow points to the 'IP Line 8' row. Below the table is the 'Trunk Group Priority' section, which states: 'Trunk group Priority allows you to define the four Trunk Group's call priority.' It contains four dropdown menus for access priority:

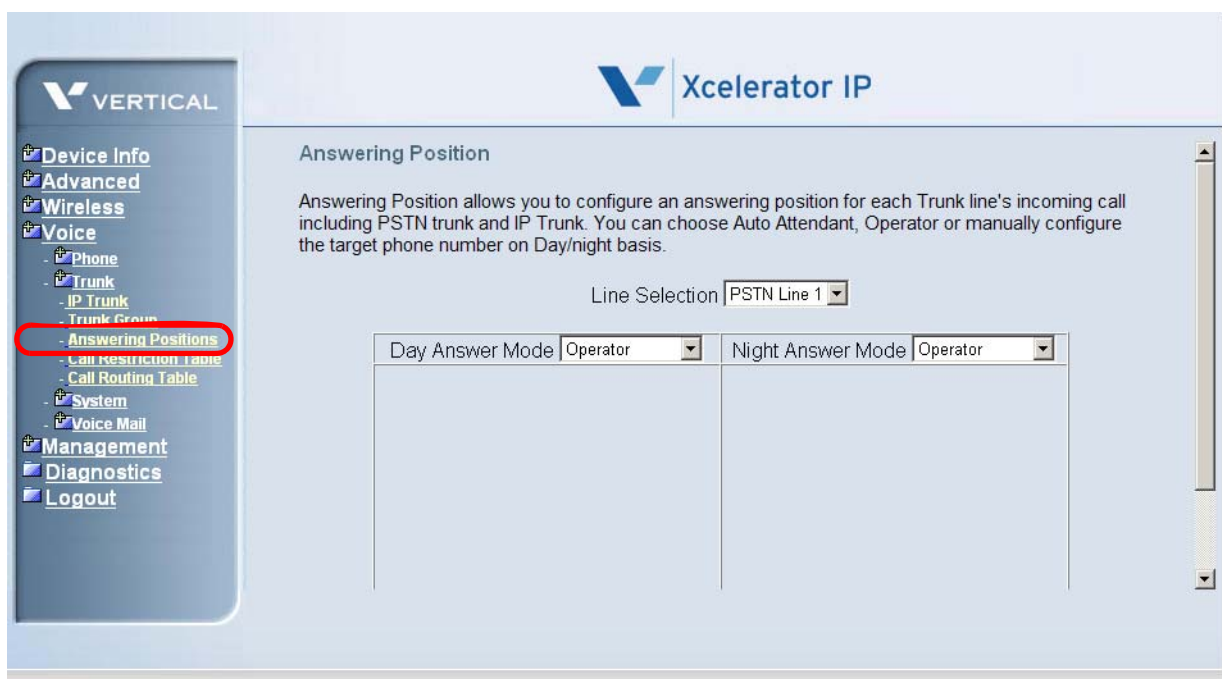

- Group 1 Access Priority: PSTN First
- Group 2 Access Priority: IP First
- Group 3 Access Priority: PSTN First
- Group 4 Access Priority: PSTN First

At the bottom of the configuration area are two buttons: 'Save Settings' and 'Cancel Changes'.

### Answering Positions

The Answering Positions screen allows you to configure answering positions for each Trunk line including PSTN trunk and IP Trunk. You can choose Auto Attendant, or manually configure the target phone number on a Day/Night mode basis.

- If **Auto Attendant** is chosen, an idle Auto-Attendant Voice (VAA) greeting will auto-answer this incoming trunk call.
- If **Extension** is chosen, you must configure the target phone number on a Day/Night mode basis. The maximum number of phones that can be defined in this configuration is six. When an incoming trunk call is received by the *Xcelerator IP*, all phones defined in the Extension group will ring. Answering any of the phones in the group will stop the ringing on all other phones.
- If **Operator** is chosen, the incoming trunk call will be redirected to the Operator.

### Call Restriction Table

The Call Restriction Table allows you to set the method for out-dialing from the IP2007.

- The value Y indicates that the caller must select a line key prior to dialing a number.
- The value N indicates that the caller may place a call without selecting a line key.
- A value of YN indicates either operation is supported

#### From/To

The allowed intervals are made up of a From and To entry which establishes a numeric range. *For example*, an entry of "From 1700", "To 1800" would include the following range of numbers as the leading: 1700, 1701, 1702, ...1799, 1800. Each From/To entry can be from 1 to 13 digits long and may contain any digit 0-9, or X (X representing any digit). The "From" entry must be less than or equal to the "To" entry.

#### Trunk Access

Xcelerator IP checks the field only when a call matches the associated allowed interval.

- If the field is set to "Y", the entry is valid when the trunk is accessed previously.
- If the field is set to "N", the trunk isn't accessed previously. The trunk will be accessed through the Call Routing Table.
- If the option is set to "YN", the entry is valid no matter the trunk is accessed or not previously.

#### COS

The Class of Service setting indicates the COS set under station programming. Any COS with a value lower than the listed COS will be allowed. COS value 0 = Highest value, COS value 7 = Lowest Value

**Call Restriction Table Configuration**

The Call Restriction Table allows you to set the method for out-dialing from the IP2007. The value Y indicates that the caller must select a line key prior to dialing a number. The value N indicates that the caller may place a call without selecting a line key. A value of YN indicates either operation is supported. The Class of Service setting indicates the COS set under station programming. Any COS with a value lower than the listed COS will be allowed. COS value 0 = Highest value; COS value 7 = Lowest Value

No.	From	To	Trunk Access	COS
1	0	9	YN	7
2			YN	0
3			YN	0
40			YN	0

<< < > >>

Save Settings Cancel Changes

### Call Routing Table

The Call Routing Table allows you to configure each entry in the Call Routing Table which contains a routing rule for outgoing calls:

- From/To setting defines the number range
- Min/Max defines the match length
- Del/Insert can change the target number
- Destination defines the outbound call interface trunk

**Note** Each entry in the Call Routing Table must first pass the rules set up in the Call Restriction Table.

In the Destination field, the dropdown list includes a particular option: "Xcelerator IP Expansion". When selecting "Xcelerator IP Expansion", the next field is a dropdown list which contains the remote Xcelerator IP names list from which a remote site can be chosen to network calls.

**Call Routing Table Configuration**

Call Routing allows you to configure the call routing table. Each item will be a routing rule for outgoing call. From/To define the number range, Min/Max define the match length, Del/Insert can change the target number, Destination to define the outbound call interface.

No.	From	To	Min	Max	Del	Insert	Destination
1	0	9	1	99	0		Group 1
2			1	99	0		Group 1
3			1	99	0		Group 1
40			1	99	0		Group 1

<< < > >>

## System Menu

The System screen is used to configure the System related parameters. The System section is separated into 5 parts:

- ☐ Numbering Plan
- ☐ Service Mode
- ☐ Transmission
- ☐ IG Dynamic Discovery
- ☐ IG Expansion Table

### Numbering Plan

The Numbering Plan section allows you to configure the extension number range. You can define the special extension numbers in this table.

**VERTICAL** Xcelerator IP

### Numbering Plan

Numbering Plan allows you to configure the extension number range. You can define the special extension number or service number.

Start extension number	<input type="text" value="100"/>
End extension number	<input type="text" value="125"/>
Operator extension during day	<input type="text" value="100"/>
Operator extension during night	<input type="text" value="100"/>
FXS Phone Number	<input type="text" value="125"/>
Operator speed-dial number	<input type="text" value="0"/>
Voice mail service number	<input type="text" value="200"/>
Start PSTN Line number	<input type="text" value="700"/>
Start IP Trunk number	<input type="text" value="710"/>
Start Trunk Group number	<input type="text" value="80"/>
All Paging number	<input type="text" value="400"/>
Start Paging Group number	<input type="text" value="401"/> <input type="button" value="Configuration"/>
Start Hunt Group Number	<input type="text" value="430"/> <input type="button" value="Configuration"/>

**Start extension number** -- starting telephone number for system extensions.

**End extension number** -- ending telephone number for system extensions. When an IP2007 phone is attached to the *Xcelerator IP*, the system Plug and Play process will allocate the first unused number from this range of station extension numbers.

**Operator extension during day** -- system operator number. When the "Operator" number is dialed, this extension will be called during the day.

**Operator extension during Night** -- Night Mode system operator number. If "Operator" is dialed from the Auto Attendant while in night mode, the extension defined in this field will be called.

**FXS Phone Number** -- Defines the FXS phone number.

**Operator speed-dial number** -- When the "Operator" is called, the extension identified in this field will be called. The operator extension length is restricted to a single character.

**Voice mail service number** -- This field defines the extension number of the *Xcelerator IP* internal voice mail system. When this extension is dialed, the user will be directed to their voice mail box and will be able to access their voice mailbox.

**Start PSTN Line number** -- The *Xcelerator IP* is equipped to support up to three analog PSTN lines. Each line has it's own direct access number which can be dialed to access the trunk directly.

**Start IP Trunk number** -- The *Xcelerator IP* is equipped to support up to eight VoIP (SIP) connections. Each line has it's own direct access number which can be dialed to access the trunk directly.

**Start Trunk Group number** -- The *Xcelerator IP* is equipped to support up to four trunk groups. When the trunk group number is dialed, the Xcelerator IP will seize the first idle trunk in the group and automatically place the call.

**All Paging number** -- The *Xcelerator IP* is equipped to support internal paging (All Calls Page). All internal IP2007 phones will be paged simultaneously if the All Page number is dialed.

**Start Hunt Group Number** -- The *Xcelerator IP* is equipped to support up to 4 hunt groups. You can enter up to 24 extension numbers in each hunt group and have each Hunt Group rerouted to Voice Mail or the Auto Attendant. Make sure the phone numbers you enter are the ones you configured in the Phone Extension page. Valid entries are 10-120 seconds in 10-second increments.

**Start Paging Group number** -- The *Xcelerator IP* is equipped to support up to three paging groups. When accessing a specific Page Group number, the internal IP2007 phones associated with that paging group will be paged simultaneously.

Pressing the "Configuration" box associated with in "Start Paging Group number", will display the Paging Group Configuration screen as shown below:

**Paging Group ---Configuration**

Make sure the phone numbers you enter are what have been configured in the Phone Extension page.

Paging Group 1	Paging Group 2	Paging Group 3
<input type="text"/>	<input type="text"/>	<input type="text"/>
<input type="text"/>	<input type="text"/>	<input type="text"/>
<input type="text"/>	<input type="text"/>	<input type="text"/>
<input type="text"/>	<input type="text"/>	<input type="text"/>
<input type="text"/>	<input type="text"/>	<input type="text"/>
<input type="text"/>	<input type="text"/>	<input type="text"/>

### Service Mode

The Service Mode section allows the user to configure the Day/Night Service Mode. You can also customize the working time (work start and end hours/minutes) manually for each weekday.

Time Mode allows for the programming of work start and stop times for a specific day of the week. The time is entered in 24-hour format. Valid entries are 00:00 to 23:59 in 1-minute increments.

The screenshot shows the 'Service Mode Configuration' page in the Xcelerator IP web interface. On the left is a navigation menu with categories: Device Info, Advanced, Wireless, Voice, System, Management, Diagnostics, and Logout. Under the 'Voice' category, 'Service Mode' is highlighted with a red circle. The main content area is titled 'Service Mode Configuration' and includes a description: 'Service Mode configuration allows you to configure the day/night service mode. You can also customize the working time manually for each week day.' Below this are three radio buttons: 'Day Mode', 'Night Mode', and 'Time Mode', with 'Time Mode' selected. A table for configuring service times is displayed, with columns for 'Week Day', 'Day Start', and 'Day End'. The table shows settings for Monday through Sunday. At the bottom are 'Save Settings' and 'Cancel Changes' buttons.

Week Day	Day Start	Day End
Mon	08:00	17:00
Tue	08:00	17:00
Wed	08:00	17:00
Thu	08:00	17:00
Fri	08:00	17:00
Sat	00:00	00:00
Sun	00:00	00:00

### Transmission

The Transmission section allows the configuration of Audio, FXS, and FXO settings.

- Click the "Save Settings" button to save the new configuration.
- Click "Cancel Changes" button if you wish to cancel the changes.

**VERTICAL** Xcelerator IP

The menu is used to set many Audio-related options. It will be applied to the all FXS and PSTN lines.

**Audio**

Country: NORTH AMERICA

Voice Active Detection: no

Packet Loss Concealment: no

Echo Cancellation Tail Length: 8 ms

RTP Packet Size: 30 ms

Preferred Codec: PCMU

Secondary Codec: G723

Thirdly Codec: PCMA

Fourth Codec: G729

**FXS**

Fax Support: NONE

Caller ID Method: FSK

Input Volume Gain: 0

Output Volume Gain: 0

Inter-digit Timeout: 5 s

**FXO**

Input Volume Gain: 0

Output Volume Gain: 0

Call Abandon Time: 600 ms

Ring Recognition Time: 200 ms

Delay Ring Time: 3.5 s

Save Settings Cancel Changes

## AUDIO

The Audio settings are used to set the following Audio-related options that will be applied to the FXS and PSTN lines.

**Country** -- Country setting is used to determine not only the Caller ID detection / transmission method but also ring/tone cadence/frequency.

**Voice Active Detection** -- VAD is a technique that detects the absence of audio and conserved bandwidth by preventing the transmission of "silence packets" over the network. Normally, this is set to On (enable).

**Packet Loss Concealment** -- Enable or Disable

**Echo Cancellation Tail Length** -- Echo cancellation time; 0 value disables the Echo Cancellor.

**RTP Packet Size** -- 10/20/.../60 ms

**Codec Priority** -- *Xcelerator IP* supports audio CODECS in G711u, G711a, G723, G729a, but only one CODEC can be active at a time. The administrator can set the priority of the CODEC protocols to be used on the system.

**FXS** - The FXS settings are used to set the following FXS-related options:

**Fax Support** -- *Xcelerator IP* supports FAX/modem tone detection with G.711 mode.

**Call ID Method** -- *Xcelerator IP* provides the ability to detect the calling party identification provided by PSTN lines. It also transmits the calling party identification to POTS ports. There are four choices: NONE | DTMF\_BR | DTMF\_AR | FSK

**Input Volume Gain** -- value range: -20 to 20. If the value is increased by 1, the actual analog-voice will become louder by 0.5dB. If the value is decreased by 1, the analog voice will become lower by 0.5dB.

**Output Volume Gain** -- value range: -20 to 20. If the value is increased by 1, the actual analog-voice will become louder by 0.5dB. If the value is decreased by 1, the analog voice will become lower by 0.5dB.

**Inter-digit Timeout** -- The inter-digit timeout value. Its range is from 0 to 30 seconds. This is the elapsed time between dialing digits on the IP2007 before the call will time out and issue re-order tone.

**FXO** - The FXO settings are used to set the following central office line options:

**Input Volume Gain** -- value range: -20 to 20

**Output Volume Gain** -- value range: -20 to 20

**Call Abandon Time** -- For every PSTN/FXO call, *Xcelerator IP* supports monitoring the call status on trunks. If the remote party hangs up, the ongoing call must be terminated. The PSTN line monitor is accomplished through monitoring the loop-break signal or busy tone. The value range is: 100/200/.../1000 ms.

**Ring Recognition Time** -- The Ring Recognition timer determines the minimum ring duration recognized as a valid incoming ring on a PSTN port. Shorter ring signals are ignored. The timer range is 200ms to 60ms in 40ms increments.

**Delay Ring Time** -- The Delay Ring timer allows the Central Office to send ICLID before the call is answered. Once the timer expires, the programmed extensions will ring and the ICLID number will be sent to the ringing extensions. The timer range is 3 to 6 seconds in 0.5 second increments.

**CO Line Flash** -- \*3 will emulate a Centrex CO line flash (switch hook flash).

### ***Xcelerator IP Dynamic Discovery***

The *Xcelerator IP* Dynamic Discovery section allows you to configure *Xcelerator IP* Network settings.

**Xcelerator IP Name** -- The name of the *Xcelerator IP* system.

**Run Mode** -- The mode that *Xcelerator IP* is running. *Xcelerator IP* can run in Master Mode or Slave Mode.

**MASTER MODE** -- When *Xcelerator IP* is running in master mode, it maintains an *Xcelerator IP* list table. When the master finds that some slave *Xcelerator IP* has changed its name or IP address, it will broadcast this new information to all other slave *Xcelerator IP*s in this list and let them update their own *Xcelerator IP* list table.

**SLAVE MODE** -- When *Xcelerator IP* is running in slave mode, the master *Xcelerator IP* IP address should be configured. When its name or IP address is changed, it will inform the master *Xcelerator IP*. And the master *Xcelerator IP* will let notify all other slave *Xcelerator IP* of this change.

The screenshot displays the Xcelerator IP configuration web interface. On the left is a vertical navigation menu with the 'VERTICAL' logo at the top. The menu items include 'Device Info', 'Advanced', 'Wireless', 'Voice', 'Phone', 'Trunk', 'System', 'Numbering Plan', 'Service Mode', 'Transmission', 'IG Dynamic Discovery' (highlighted with a red circle), 'IG Expansion Table', 'Voice Mail', 'Management', 'Diagnostics', and 'Logout'. The main content area is titled 'Configure IG Dynamic Discovery Settings'. It contains two fields: 'IG Name:' with an empty text input box, and 'Run Mode:' with a dropdown menu currently set to 'Master Mode'. At the bottom of the settings area are two buttons: 'Save Settings' and 'Cancel Changes'.

### ***Xcelerator IP Expansion Table***

The *Xcelerator IP* Expansion Table displays a list of all interconnected *Xcelerator IP* systems. The *Xcelerator IP* Expansion Table list can be obtained through *Xcelerator IP* Dynamic Discovery. The *Xcelerator IP* Expansion Table also allows you to define the specific *Xcelerator IP* that calls will be routed to.

**Xcelerator IP Host Name** -- The remote *Xcelerator IP* system name.

**IP Address** -- The remote *Xcelerator IP* IP address.

**Port** -- The remote *Xcelerator IP* SIP port.

**COS** -- The remote *Xcelerator IP* Class of Service.

**Valid** -- If this setting is set to "N", all calls will be rejected from the specified remote *Xcelerator IP* site.

The screenshot displays the Xcelerator IP configuration web interface. On the left is a vertical sidebar with the 'VERTICAL' logo at the top. The sidebar contains a list of menu items: 'Device Info', 'Advanced', 'Wireless', 'Voice', 'Phone', 'Trunk', 'System', 'Numbering Plan', 'Service Mode', 'Transmission', 'IG Dynamic Discovery', 'IG Expansion Table' (which is highlighted with a red oval), 'Voice Mail', 'Management', 'Diagnostics', and 'Logout'. The main content area on the right has the 'Xcelerator IP' logo at the top. Below the logo, it states 'This page allows you to configure Xcelerator IP Expanded host manually.' and 'Extension Configuration'. Under 'Extension Configuration' is the 'Xcelerator IP Host Configuration' section, which includes input fields for 'Host Name', 'IP Address', and 'Port', and dropdown menus for 'COS' (set to '0') and 'Validity' (set to 'No'). At the bottom of this section are 'Save Settings' and 'Back' buttons.

## Voice Mail Menu

*Xcelerator IP* provides a built-in Auto Attendant and Voice Mail System. Programming of the Voice Mail is segmented into four sections:

- General
- Extension
- Holiday
- Advanced

VERTICAL Xcelerator IP

Voice Mail general settings allows you to configure the general settings of the auto attendant and voice mail.

**General**

Working Time	08001700	HHMMhhmm
Saturday Working Time	00000000	HHMMhhmm
Sunday Working Time	00000000	HHMMhhmm
Lunch Break Time	12001300	HHMMhhmm
Admin Password	000000	6 bits
MAX Retry Time	2	1-9
Action When Max Error Reached	Forward to Operator	
Prompt Language	Language 1 Only	
Email Notify with Voice Files	No	
Days for Keeping Voice Mail	7	1-7
SMTP Server		
SMTP Server Port	25	
Sender Email Address		
Sender User Name		
Sender Password		

Save Settings Cancel Changes

**General**

The General section allows you to configure the general setting for the Auto Attendant and Voice Mail.

**Working Time** -- Defines Weekday working hours. If a weekday is a holiday and the Holiday greeting or after hours greeting is selected, the working time for that day needs to be set to 00000000.

**Saturday Working Time** -- Defines Saturday working hours. If night mode is used for Saturdays, working time is set to 00000000 00000000 means Saturday Holiday.

**Sunday Working Time** -- Defines Sunday working hours. If night mode is used for Sundays, working time is set to 00000000 00000000 means Sunday Holiday.

**Lunch Break Time** -- Defines time frame when a lunch greeting can be played.

**Admin Password** -- Administrator password setting.

**Max Retry Time** -- Maximum number of user attempts to access the system voice mail before access is denied. Value range is 1 through 9.

**Action When Max Error Reached** -- This field defines the action taken by the *Xcelerator IP* when the MAX Retry time threshold has been reached. Options are

**Prompt Language** -- The Automated Attendant can support two language settings. This section allows the administrator to set the primary and secondary languages.

**Email Notify with Voice Files** -- This setting activates Unified Messaging which allows a voice message to be sent as a WAV file attachment to an email box.

**Days for Keeping Voice Mail** -- Number of days that voice messages are stored on the *Xcelerator IP* before being overwritten. The value range is 1 to 7 days.

**SMTP Server** -- SMTP Mail Server name or IP address. If the server name is used, there must be a DNS server on the network to perform the name-IP address resolution.

**SMTP Server Port** -- SMTP Mail Server port. The default is 25.

**Sender Email Address** -- Email Address of Sender. This entry would usually be the address of the network administrator; such as, "admin@xyz.com"

**Sender User Name** -- User Name of Sender's Email. This entry is optional and would most likely be the network admin user name.

**Sender Password** -- Password of Sender's Email.

### Extension

After pressing the "Configure" button, the Extension Voice Mail Configuration screen for that extension will be displayed as shown below:

Voice Mail extension configuration allows you to configure voice mail settings for each extension.

#### SIP Extensions Registration

No.	Ext.	Name	Operation
1	125	125	Configure
2	100	100	Configure
3	101	101	Configure
4	102	102	Configure
5	103	103	Configure
30			

Navigation: << < > >>

#### Extension Configuration

This page allows you to configure voice mail settings for each extension.

Ext. 125 Configuration

Always Forward to Voice Mail Box: No

DND: Disable

Voice Mail: Enable

Password: 0000 (4 digits)

E-mail Address:

Prompt Language: Language 1 Only

Buttons: Save Settings, Back

The following items can be set up in the Voice Mail configuration area:

**Always Forward to Voice Mail Box** -- Sends all outside calls to voice mail for the extension (Auto-Attendant).

**DND** -- Enables/Disables Do Not Disturb feature for the extension (Auto-Attendant).

**Voice Mail** -- Enables/Disables the Voice Mail function for the extension (Auto-Attendant).

**Password** -- Sets the Password for the voice mailbox of the extension.

**E-mail Address** -- Sets the Phone user's E-mail Address.

**Prompt Language** -- Provides a choice of languages for the prompts at the station. English is the default as Language 1.

*The Total Recording Message Time for one extension depends on how many extensions are connected to the Xcelerator IP. (See current members in the Phone Extension Table.) The current Xcelerator IP configuration allows 240 minutes of recording time.*

*Total Recording Message Time for One Extension = (240 minutes) divided by (Total Members)*

### Holiday

The Holiday settings allow the administrator to configure the holiday or special off-duty days for the *Xcelerator IP*. The Holiday setting has a higher value which allows it to overwrite the normal settings.

Click the buttons under the table to choose additional pages.

Holiday Settings allows you to configure the holiday or special off-duty days.

#### Holiday Settings

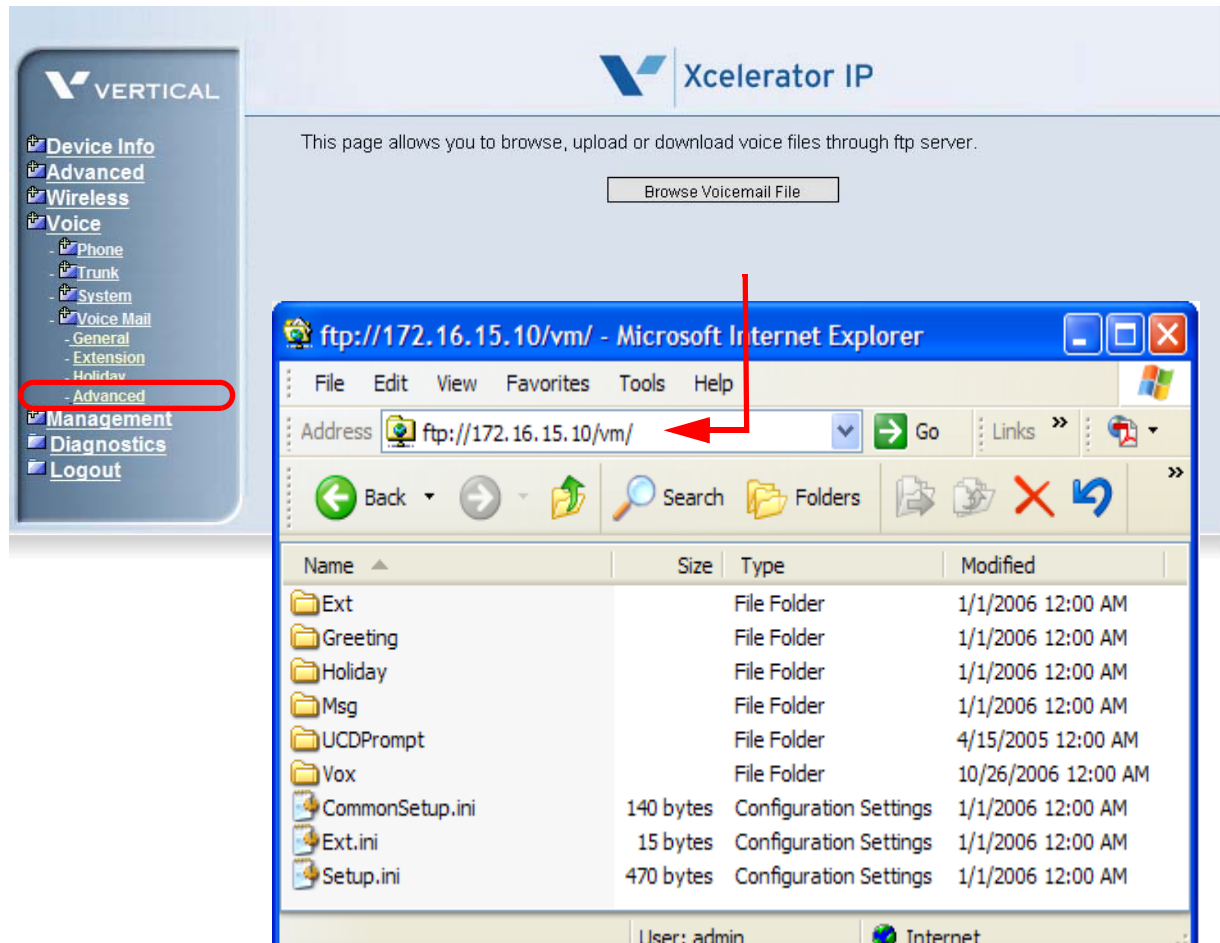

No.	Date(MMDD)	Holiday
1		On duty
2		On duty
3		On duty
4		On duty
5		On duty
20		On duty

<< < > >>

Save Settings Cancel Changes

**Advanced**

The Advanced Settings allow the administrator to browse, upload or download voice files via FTP server.

**Management Settings**

The system administrator can perform the following functions to manage the configurations, events, and software update of the *Xcelerator IP*.

Settings

Log

Time Setting

- Internet Time
- Day Light Save

Access Control

- Web Port
- Services
- IP Addresses
- Password

Update

Save&Reboot

## Settings Menu

The System Administrator can perform *Xcelerator IP* settings (database) backup, restore, and update from this location. The settings can be saved from *Xcelerator IP* to a local PC. The saved setting file can also be loaded from a PC to the *Xcelerator IP*. These functions can help the system administrator to manage multiple *Xcelerator IP*s efficiently. Restore Default will set the *Xcelerator IP* with the factory default configuration.

### Settings -- Backup

Click "Save Settings"saves your *Xcelerator IP* configurations to a file on your PC.

### Tools -- Restore Default Settings

Click "Restore Default Settings" to restore the factory default settings.

### Tools -- Update Settings

Click "Browse" to locate the setting file saved on the Local PC. Then, "Update Settings" would apply the settings to the Xcelerator IP according to the configuration file.

## Log Menu

The Log Setting allows the System Administrator to view the System Log and configure the System Log options. Click "View System Log" to view the System Log. Click "Configure System Log" to configure the System Log options. When configuring the System Log options, you can select from 8 Log Levels and 8 Display Levels:

- |               |                   |
|---------------|-------------------|
| 0 - Emergency | 4 - Warning       |
| 1 - Alert     | 5 - Notice        |
| 2 - Critical  | 6 - Informational |
| 3 - Error     | 7 - Debugging     |

The Log Level sets the logging level that is applied to *Xcelerator IP*. The Display Level displays only the log message requested. As a result, is a subset of the retrieved data from the total log message which was logged according to the setting of the Log Level. If "Mode" is set to "Remote" or "Both", the log messages would be sent to the specified UDP port of the specified log server. By clicking on the "Save Settings" button you can save the new configuration. Clicking on the "Cancel Changes" button cancels the changes.

## Registered Phone Menu

The Registered Phone section lists all the phones registered to the *Xcelerator IP* and provides the link to access the phone's web page. By clicking on the link associated with a phone, the administrator will be logged onto the web page of the specific phone.

The screenshot shows the Xcelerator IP web interface. On the left is a navigation menu with the following items: Device Info, Advanced, Wireless, Voice, Management (with sub-items: Settings, Log, Registered Phone, Time Settings, Access Control, Update, Save&Reboot), Diagnostics, and Logout. The 'Registered Phone' item is highlighted with a red circle. The main content area is titled 'Registered Phone' and contains the text: 'This page lists the information of registered phones, and provides the link to access the phone's web page.' Below this text is a table with the following data:

Phone	IP Address	From	Execution
100	192.168.1.2	LAN	<a href="#">Link to Phone</a>

## Time Settings

The Time Settings section allows the System Administrator to configure the *Xcelerator IP* to automatically synchronize with the NTP time server.

### Internet Time

The Internet Time section allows the System Administrator to configure the *Xcelerator IP* system time and Daylight Saving Time.

The screenshot shows the Xcelerator IP web interface with the 'Internet Time' section selected in the navigation menu (highlighted with a red circle). The main content area is titled 'Internet Time' and contains the text: 'This page allows you to define the Xcelerator IP reference clock source.' Below this text is a checkbox labeled 'Automatically synchronize with Internet time servers.' which is checked. There are two input fields for NTP time servers: 'First NTP time server:' with the value 'time.nist.gov' and 'Second NTP time server:' with the value 'None'. There is also a dropdown menu for 'Time zone offset:' with the value '(GMT-07:00) Arizona, Mazatlan'. At the bottom are two buttons: 'Save Settings' and 'Cancel Changes'.

*Day Light Savings Time*

The Daylight Savings Time page allows you to configure the Daylight Saving Time (DST) which includes support for auto adjustment of daylight saving time. By clicking on the "Save Settings" button, the DST configuration will be saved to the *Xcelerator IP*. Clicking the "Cancel Changes" button cancels any changes.

- ❑ Default International DST Rule obeys the international standard rule.
- ❑ Manual DST Rule allows you to define your own Daylight Savings Time Rule.

**Start Time of DST** -- Daylight Savings Time start date and time.

If "Weekday" is set to "0", the date to start Daylight Savings is the date given in the "Month" and "Day" setting. If "Weekday" is set to other than "0", Daylight Savings Time will start on the "Weekday" after the given date.

**End Time of DST** -- Daylight Savings Time start date and time.

If "Weekday" is set to "0", the date to end Daylight Savings is the date given in the "Month" and "Day" setting. If "Weekday" is set to other than "0", Daylight Savings Time will end on the "Weekday" after the given date.

**Save Time during DST Period** -- The time (in hours, minutes, and seconds) to add to the current time during daylight saving period.

**VERTICAL** Xcelerator IP

**Day light Savings Time**

This page allows you to configure the Day light Savings Time (DST) which supports auto adjustment for daylight saving time.

Manual DST Rule

**Start Time of DST**

Month: 1 Day: 1

DayFlag: + WeekDay: 0

Hour: 0 Minute: 0 Second: 0

**Save Time during DST Period**

SaveFlag: Addition

Hour: 0 Minute: 0 Second: 0

Save Settings Cancel Changes

## Access Control Menu

The Access Control settings allow the System Administrator to configure the Web Port, Service Control List, IP Address Access Control mode and password for user 'admin'.

### Web Port

This page allows you to change the number of the *Xcelerator IP* web port. A change will take effect after a system reboot. The default for the Web Port is 80.

**VERTICAL** | **Xcelerator IP**

**Web Port**

This page allows you to change system's web port. And it will take effect after reboot.

Web Port

### Services

Clicking on the Enable box for any of the services listed will activate that service. HTTP, ICMP, Telnet, and TFTP are supported on the *Xcelerator IP*.

**VERTICAL** | **Xcelerator IP**

**Services Access**

A Service Control List ("SCL") enables or disables services from being used.

Services	LAN	WAN
HTTP	<input type="checkbox"/> Enable	<input checked="" type="checkbox"/> Enable
ICMP	<input type="checkbox"/> Enable	<input checked="" type="checkbox"/> Enable
TELNET	<input checked="" type="checkbox"/> Enable	<input checked="" type="checkbox"/> Enable
TFTP	<input checked="" type="checkbox"/> Enable	<input checked="" type="checkbox"/> Enable

## Chapter 5 - Xcelerator IP Configuration

### IP Addresses

The IP Address Access Control mode, if enabled, *Xcelerator IP* will permit access to local management services from IP addresses contained in the Access Control List. If the Access Control mode is disabled, the system will not validate IP addresses from incoming packets.

The screenshot shows the 'Access Control -- IP Address' configuration page in the Xcelerator IP web interface. The left sidebar contains a menu with 'IP Addresses' highlighted in red. The main content area has a title 'Access Control -- IP Address' and a descriptive paragraph. Below the text, there are radio buttons for 'Access Control Mode' with 'Disable' selected. At the bottom, there are 'Add' and 'Remove' buttons for managing the IP address list.

**Access Control -- IP Address**

The IP Address Access Control mode, if enabled, permits access to local management services from IP addresses contained in the Access Control List. If the Access Control mode is disabled, the system will not validate IP addresses for incoming packets. The services are the system applications listed in the Service Control List

Access Control Mode: ☒ Disable ☐ Enable

IP Address Remove

Add Remove

### Password

The Password page allows the System Administrator to define the passwords for the administrator. The user Administrator has unrestricted access to change and view configuration of the *Xcelerator IP* Router.

The "Password" field is used to enter the password, up to 16 alpha characters are allowed (no spaces).

The screenshot shows the 'Password Configuration' page in the Xcelerator IP web interface. The left sidebar contains a menu with 'Password' highlighted in red. The main content area has a title 'Password Configuration' and a descriptive paragraph. Below the text, there are three input fields for 'Old Password', 'New Password', and 'Confirm Password'. At the bottom, there are 'Save Settings' and 'Cancel Changes' buttons.

**Password Configuration**

Access to your Xcelerator IP is controlled through user accounts: admin.

The user name "admin" has unrestricted access to change and view configuration of your Xcelerator IP.

Use the password fields to enter up to 16 characters and click "Save Settings" to change or create passwords. Note: Password cannot contain a space.

New Password:

Confirm Password:

Save Settings Cancel Changes

## Update Menu

New software can be uploaded from either a local or a remote PC. Clicking the "Browse" button will allow the System Administrator to locate the new software image file in their PC. Then, by clicking "Update Software" the System Administrator will be able to process the software update. Clicking on the "Cancel Changes" button cancels the software update.

*The software update process takes about 2 minutes to complete, and your the Xcelerator IP Router will automatically reboot at the end of the software update.*

**VERTICAL** Xcelerator IP

**Update Software**

Step 1: Obtain an updated software image file from your system provider.

Step 2: Enter the path to the image file location in the box below or click the "Browse" button to locate the image file.

Step 3: Click the "Update Software" button once to upload the new image file.

NOTE: The update process takes about 2 minutes to complete, and your Xcelerator IP will reboot.

Software File Name:

## Save & Reboot Menu

Click "Save/Reboot" to save all changes and reboot the *Xcelerator IP*. The *Xcelerator IP* will automatically save any configuration changes that were made prior to the reboot, and any modified settings will take effect after the *Xcelerator IP* system reboot.

## Diagnostic Information

This page provides a user with the following information:

- ❑ network connection information on the net
- ❑ status of *Xcelerator IP* PSTN Line
- ❑ status of *Xcelerator IP* IP Trunk Line
- ❑ status of *Xcelerator IP* VAA Line
- ❑ status of *Xcelerator IP* FXS
- ❑ status of *Xcelerator IP* Extension phones

Clicking the Reset button will allow you to release the selected trunk line or reset a blocked one.

**VERTICAL** | **Xcelerator IP**

**Test your network connection**

*Chapter 5 - Xcelerator IP Configuration*

---

1. Test Your Network Connection displays the current status of the WAN port, LAN connection, and Wireless LAN connection. The following status indicators are provided:
  - ☐ PASS -- Connected and operating normally
  - ☐ FAIL -- Connection failed
  - ☐ DOWN -- No communication on the Wan or LAN link
2. Test the Status of PSTN Line / IP Trunk Line / VAA Line / FXS displays the current status of the PSTN Trunk interface, the IP Trunk interface, Auto-Attendant ports, and FXS port. The following status indicators are provided:
  - ☐ FAILED -- Connection or Registration failure
  - ☐ IDLE -- Indicates the specific resource is in an idle state
  - ☐ N/A -- Indicates the specific resource the line is not available
  - ☐ Busy -- Indicates the specific resource is in use
3. Registered Extension Phone in LAN or WAN displays the physical registration of the attached IP2007 phones.
  - ☐ LAN -- indicates the IP2007 is registered through a LAN port
  - ☐ WAN -- indicates the IP2007 is registered through the WAN port

# System Prompts & Recordings

The System Prompts & Recordings appendix is an Administrator tool that will assist you with the following operations:

- ❑ Verifying and referring to system preset voice prompts
- ❑ Setting up a second language for voice prompts (Localization)
- ❑ Recording new voice prompts

## Xcelerator IP Voice Prompts

The *Xcelerator IP* voice files can be configured using one of two methods: 1) via the telephone user interface, or 2) via prerecorded .vox files that are loaded on the *Xcelerator IP* by the System Administrator. Both methods are described below.

### Localization - Using a Second Language

The following tables and charts are provided to assist with localization for *Xcelerator IP*. The file chart provides the text of each of the recorded prompts and messages on *Xcelerator IP*. The administrator will use these files to provide the correct prompts when translating from English to a second language. The filename will need to have the leading digit changed to a 2 to indicate to the *Xcelerator IP* that this is a second language file.

### Preset Voice Prompts

File #	Contents
10001	If you know your party's extension, you may dial it at anytime or press zero for the operator.
10002	Our office is currently closed. If you know your party's extension you may dial it at any time or press zero to leave a message in our general mailbox.
10003	Our office is currently closed for lunch. If you know your party's extension you may dial it at any time or press zero to leave a message in our general mailbox.
10004	Our office is currently closed for the holiday. If you know your party's extension you may dial it at any time or press zero to leave a message in our general mailbox.
10051	Please dial your number now. When you are finished, press pound (#).
10097	This mailbox is full. No more messages can be accepted at this time. Goodbye.
10102	The number you dialed is invalid. Please hold while your call is transferred to the operator.
10103	The number you dialed is invalid.
10104	Please check your number and dial again.
10106	The extension you dialed is invalid. Please dial again.
10107	The extension you dialed is invalid. Please check the number and dial again.
10201	Please hold while your call is being transferred.
10205	The extension you dialed is currently busy, press star (*) to wait.
10206	The extension you dialed is not answering, press star (*) to try another extension.
10207	To leave a message, press pound (#).
10210	Press zero to reach an operator.
10212	The extension you dialed is busy. Press 1 to hold.
10221	The extension you dialed is unavailable. Please dial another extension or press zero to reach the operator.

## Appendix A - System Prompts &amp; Recordings

## Recording Voice Prompts

There are two ways to change the *Xcelerator IP* voice prompts: 1) using an IP2007 Phone or 2) using an TFTP Server.

### Via IP Phone Web-based (configuration utility)

1. Using an *Xcelerator IP* phone, dial the Voice Mail Directory Number ("100" at default).
2. Type in the password of the extension. ("0000" at default).
3. Press the "\*" key to enter the Administrator mode.
4. Type in the Voice Mail Administrator password ("000000" at default).
5. Listen to the prompt and perform one of the following:
  - a. Press [1] to record the 1st language main system greetings (File **10001** - **10004**).
  - or-
  - b. Press [2] to record the 2nd language main system greetings (File **20001** - **20004**).
  - or-
  - c. Press [3] and type the desired five-digit file number to record the new prompt/greeting directly into the respective file name.

**IMPORTANT** -- The individual voice files MUST be saved in the following format:

- Dialogic vox
- u-law mono
- 8Khz

For additional support, contact your VERTICAL authorized dealer.

### Via FTP Server

1. All prompt/greeting files are stored and saved in the VOX folder in PCM u-law format. You can record your prompt in the WAV format first and then convert to PCM u-law. There are numerous free audio conversion applications available on the Internet.
2. Log in to the *Xcelerator IP* embedded FTP server: ftp://*Xcelerator IP* IP address.
- or-
- From the *Xcelerator IP* web interface, select Voice > Voice Mail > Advanced, then press the "Browser Voicemail File" button.
3. Save the new prompt to the VOX folder with the same file number to replace the existing prompt.

**BACKUP Files** -- It is recommended that you save all original prompts to another file directory before updating the voice files.
